Nuclear 2 0 Why A Green Future Needs Nuclear Power:

Nuclear 2.0 Mark Lynas, 2014-01-30 Everything you thought you knew about nuclear power is wrong This is just as well because nuclear energy is essential to avoid catastrophic global warming While renewables will surely play an important part in our future energy strategy expecting them to deliver all the world's power is dangerously delusional In 2014 statistics showed that wind and solar power contributed only 1 per cent of global primary energy Similarly while energy saving has a key role to play in the developed world there is no possibility of humanity as a whole using less energy while the developing world is extracting itself from poverty And the fact is that the anti nuclear movement of the 1970s and 80s has made the world more dependent on fossil fuels In Nuclear 2 0 environmental campaigner Mark Lynas debunks the myths that have cast nuclear energy in a bad light Often overlooked because of concerns surrounding nuclear waste and radiation poisoning after the Chernobyl disaster atomic energy is one of the most impressive sources of low carbon power In this enlightening read Mark looks at the science and re evaluates the situation to unravel why our future is threatened not just by the big fossil fuel companies but also the professional anti nuclear Green groups This book is a call for all those who want to see a low carbon future to join forces and advocate a huge Apollo Program scale investment in wind solar and nuclear power What

really happened in Fukushima Michael Wenkart, 2014-04-10 We all remember the disaster in Fukushima The questions are What happened really there and What did we learn from it Nuclear power has long been touted as the energy saviour in terms of environmental impact and capacity generation The incident at Chernobyl nearly 30 years ago cast huge doubts over the safety and wisdom of relying on nuclear power too heavily The recent Fukushima disaster raised the spectre of nuclear safety and the possibly horrendous fallout and consequences from a major nuclear accident for the world to consider and worry about all over again *Lesson Learned?* Michael Marcovici, 2013-12-06 Nuclear power has long been touted as the

energy saviour in terms of environmental impact and capacity generation The incident at Chernobyl nearly 30 years ago cast huge doubts over the safety and wisdom of relying on nuclear power too heavily The recent Fukushima disaster raised the spectre of nuclear safety and the possibly horrendous fallout and consequences from a major nuclear accident for the world to consider and worry about all over again The Fall and Rise of Nuclear Power in Britain Simon Taylor, 2016-03-02 The

story of the rise fall and second ascendancy of nuclear power in the United Kingdom Britain was a pioneer in civil nuclear power and there were once high hopes in the 1950s that this could be a source of cheap electricity and a valuable export opportunity In *The Fall and Rise of Nuclear Power in Britain* Simon Taylor examines why these hopes were never realised and how we have come to see a new rise in nuclear power in recent years He traces the UK's nuclear energy history from the optimism of the 1950s through the disillusionment of the 1980s to a new role for nuclear in the 21st century The construction of Britain's first new nuclear power station in 20 years Hinkley Point C marks a major change of policy Throughout this book Taylor provides a comprehensive overview of energy policy economics politics and changing environmental priorities keying

into debates about the generation and sustainability of this controversial energy source Will this new nuclear energy turn out to be a heroic story of UK leadership on a matter of global importance or will it prove a hugely costly folly as with British nuclear power in the past Revisiting Nuclear Power Anne C. Cunningham,2017-07-15 In an era defined by anxiety over global warming and the search for alternative fuel sources nuclear power is rarely part of the conversation It promises limitless power and a drastic reduction in greenhouse gas emissions worldwide Yet it is by no means perfectly safe or clean as Three Mile Island Chernobyl and Fukushima remind us Even so thirty countries are operating 444 reactors accounting for almost 11 percent of the world s electricity production The debate over nuclear energy is a fierce and emotional one and arguments agendas assumptions and factual information must be scrutinized meticulously and carefully This volume allows readers to do just that as they begin to form their own opinions on the viability of nuclear power *International Seminars On Nuclear War And Planetary Emergencies - 48th Session: The Role Of Science In The Third Millennium* Richard C Ragaini,2016-07-28 Proceedings of the 48th Session of the International Seminars on Nuclear War and Planetary Emergencies held in Erice Sicily This Seminar has again gathered in 2015 over one hundred scientists from 43 countries in an interdisciplinary effort that has been going on for the last 32 years to examine and analyze planetary problems which had been followed up all year long by the World Federation of Scientists Permanent Monitoring Panels **Sustainable Development of Denmark in the World, 1970-2020** Bo Fritzboeger,2022-05-24 This book provides a holistic overview of the history of sustainable development in Denmark over the last fifty years covering a host of issues central to the Sustainable Development Goals SDGs ending poverty ensuring inclusive and equitable education reducing inequality making cities and settlements inclusive safe and resilient and fostering responsible production and consumption patterns to name a few It argues for a new framework of sustainability history one that is truly global in outlook As such it explores what truly global sustainable development would look like It considers how economic growth has been the driver for prosperity in the global north and considers whether sustainable development and continued economic growth are irreconcilable and what the future of sustainable development initiatives in Denmark might look like **The Power of Nuclear** Marco Visscher,2024-11-07 From the pilot s seat in the B 29 that dropped the atomic bomb on Hiroshima to Chernobyl s exclusion zone and to the site in Finland where highly radioactive waste will be buried this is the incredible story of nuclear power Providing a vivid account of the characters and events that have shaped the world s most controversial energy source and our thinking around it The Power of Nuclear weaves politics culture and technology to explore nuclear power s past and future In his quest to disentangle myth from facts Marco Visscher asks How dangerous is radiation What should you do after a nuclear accident Have nuclear weapons really made the world less safe And why do some still reject the evidence showing the atom can provide unlimited clean energy free countries of their dependence on fossil fuels and combat climate change This is an informed look at what we might do with nuclear power and what nuclear power is doing to us A Bright Future

Joshua S. Goldstein, Staffan A. Qvist, 2019-01-08 The inspiration for Nuclear Now the new Oliver Stone film co written by Joshua Goldstein As climate change quickly approaches a series of turning points that guarantee disastrous outcomes a solution is hiding in plain sight Several countries have already replaced fossil fuels with low carbon energy sources and done so rapidly in one to two decades By following their methods we could decarbonize the global economy by midcentury replacing fossil fuels even while world energy use continues to rise But so far we have lacked the courage to really try In this clear sighted and compelling book Joshua Goldstein and Staffan Qvist explain how clean energy quickly replaced fossil fuels in such places as Sweden France South Korea and Ontario Their people enjoyed prosperity and growing energy use in harmony with the natural environment They didn't do this through personal sacrifice nor through 100 percent renewables but by using them in combination with an energy source the Swedes call k kraft hundreds of times safer and cleaner than coal Clearly written and beautifully illustrated yet footnoted with extensive technical references Goldstein and Qvist's book will provide a new touchstone in discussions of climate change It could spark a shift in world energy policy that in the words of Steven Pinker's foreword literally saves the world

Planning After Petroleum Jago Dodson, Neil Sipe, Anitra Nelson, 2016-10-04 The past decade has been one of the most volatile periods in global petroleum markets in living memory and future oil supply security and price levels remain highly uncertain This poses many questions for the professional activities of planners and urbanists because contemporary cities are highly dependent on petroleum as a transport fuel How will oil dependent cities respond and adapt to the changing pattern of petroleum supplies What key strategies should planners and policy makers implement in petroleum vulnerable cities to address the challenges of moving beyond oil How might a shift away from petroleum provide opportunities to improve or remake cities for the economic social and environmental imperatives of twenty first century sustainability Such questions are the focus of contributors to this book with perspectives ranging across the planning challenge overarching petroleum futures governance transition and climate change questions the role of various urban transport nodes and household responses ways of measuring oil vulnerability and the effects on telecommunications ports and other urban infrastructure This comprehensive volume with contributions from and focusing on cities in Australia the UK the US France Germany the Netherlands and South Korea provides key insights to enable cities to plan for the age beyond petroleum

The Coming Chaos Ken Casey, 2018-04-13 The Coming Chaos By Ken

Casey This book describes the coming chaos that will result in the year 2100 if the world fails to develop a workable nuclear breeder reactor In 2100 the world will be depleted of all but the most expensive oil gas and coal The world will also be largely depleted of the uranium that is used in conventional nuclear reactors The result will be a shutdown of the world electric grid and a shutdown of all vehicular traffic In 2100 the world will have an estimated population of 11 billion people By 2150 the population of the world will plummet to 3 billion people if something is not done soon In order to have a seamless transition into the 22nd century the world must make a concerted effort today to develop nuclear breeder reactors to keep the world electric grid functioning in 2100 The most likely candidate appears to be the Molten Salt breeder reactor also known as the Liquid Fluoride Thorium Reactor With nuclear breeder reactors the world will have electric vehicles at their disposal However for long distance travel the world must continue development of ammonia fueled vehicles The best candidate appears to be a prototype hybrid electric ammonia fueled vehicle that is being promoted by the South Koreans By 2100 the carbon dioxide in the world's atmosphere will increase by over 3 trillion tons This is inevitable without change It will result in temperatures approximately 6 degrees higher 3.5 °C than today Virtually all the glaciers of the world except in the Himalayas will completely melt which will devastate agriculture in the Far East The world's oceans will rise by about 59 feet in 2100 which will inundate over 100 million homes and play havoc with the coastal cities of the world All of this can be ameliorated if the world limits the use of fossil fuels in favor of ammonia fuels and switches to the use of nuclear breeder reactors

Animal Ethics in the Age of Humans Bernice Bovenkerk, Jozef Keulartz, 2016-09-21 This book provides reflection on the increasingly blurry boundaries that characterize the human animal relationship In the Anthropocene humans and animals have come closer together and this asks for rethinking old divisions Firstly new scientific insights and technological advances lead to a blurring of the boundaries between animals and humans Secondly our increasing influence on nature leads to a rethinking of the old distinction between individual animal ethics and collectivist environmental ethics Thirdly ongoing urbanization and destruction of animal habitats leads to a blurring between the categories of wild and domesticated animals Finally globalization and global climate change have led to the fragmentation of natural habitats blurring the old distinction between in situ and ex situ conservation In this book researchers at the cutting edge of their fields systematically examine the broad field of human animal relations dealing with wild liminal and domestic animals with conservation and zoos and with technologies such as biomimicry This book is timely in that it explores the new directions in which our thinking about the human animal relationship are developing While the target audience primarily consists of animal studies scholars coming from a wide range of disciplines including philosophy sociology psychology ethology literature and film studies many of the topics that are discussed have relevance beyond a purely theoretical one as such the book also aims to inspire for example biologists conservationists and zoo keepers to reflect on their relationship with animals

Six Minutes to Winter Mark Lynas,2025-05-08

Terrifying and timely this is a book everyone should read and heed George Monbiot Urgent gripping and sobering Six Minutes to Winter is a hair raising wake up call David Wallace Wells Powerful and insightful Although many have forgotten about nuclear weapons we shouldn t Charles Oppenheimer The world is currently closer to superpower conflict than at any time since the 1962 Cuban Missile Crisis World War III is a real possibility and with 12 000 warheads in the arsenals of more than half a dozen countries we are standing on a nuclear knife edge Despite receiving very little attention nuclear war is a far greater threat to humanity s immediate survival than climate change While climate heating threatens humanity over many decades nuclear war could destroy civilisation in just a few hours A major missile exchange would mean months of near total darkness followed by a decade long global nuclear winter that would destroy most life on Earth Virtually everyone would starve in the resulting worldwide famine and there would be no reliable refuge We are sleepwalking to Armageddon There are no mass marches no COPs no nuclear Greta But the climate experience teaches us that ignoring a problem is no solution and that a worldwide mobilisation can work Six Minutes to Winter presents an unflinching view of the nuclear nightmare but also describes how weapons can be taken off hair trigger alert and ultimately abolished altogether If human civilisation is to survive long term we have no alternative

The Unconstructable Earth Frédéric Neyrat,2018-10-16 Winner Grand Prize French Voices Award for Excellence in Publication and Translation The Space Age is over Not at all A new planet has appeared Earth In the age of the Anthropocene the Earth is a post natural planet that can be remade at will controlled and

managed thanks to the prowess of geoengineering This new imaginary is also accompanied by a new kind of power geopower that takes the entire Earth in its social biological and geophysical dimensions as an object of knowledge intervention and governmentality In short our rising awareness that we have destroyed our planet has simultaneously provided us not with remorse or resolve but with a new fantasy that the Anthropocene delivers an opportunity to remake our terrestrial environment thanks to the power of technology Such is the position we find ourselves in when proposals for reengineering the earth s ecosystems and geosystems are taken as the only politically feasible answer to ecological catastrophe Yet far from being merely the fruit of geo capitalism this new grand narrative of geopower has also been activated by theorists of the constructivist turn ecomodernist postenvironmentalist accelerationist who have likewise called into question the great divide between nature and culture With the collapse of this divide a cyborg hybrid flexible nature has been built an impoverished nature that does not exist without being performed by technologies that proliferate within the space of human needs and capitalist imperatives Underneath this performative vision resides a hidden anaturalism denying all otherness to nature and the Earth no longer by externalizing it as a thing to be dominated but by radically internalizing it as something to be digested Constructivist ecology thus finds itself in no position to confront the geoconstructivist project with its claim that there is no nature and its aim to replace Earth with Earth 2 0 Against both positions Neyrat stakes out the importance of the unconstructable Earth Against the fusional myth of technology over nature but without returning to the division between nature and culture he proposes an ecology of separation that acknowledges the wild subtractive capacity of nature Against the capitalist technocratic delusion of earth as a constructible object but equally against an organicism marked by unacknowledged traces of racism and sexism Neyrat shows what it means to appreciate Earth as an unsubstitutable becoming a trajectory that cannot be replicated in a laboratory Underway for billions of years withdrawing into the most distant past and the most inaccessible future Earth escapes the hubris of all who would remake and master it This remarkable book which will be of interest to those across the humanities natural sciences and social sciences from theorists to shapers of policy recasts the earth as a singular trajectory that invites humans to turn political ecology into a geopolitics

Prescriptions for the Climate Crisis Simon Richards,2021-05-22 When the fortunate among us feel very sick we visit a doctor If we are lucky they will decide that the ailment is curable and issue us with a prescription For some tablets perhaps Or something simpler like rest

More often than not the problem goes away Our planet is sick according to the scientists of the IPCC the Intergovernmental Panel on Climate Change Their prescription to humanity is clear we must arrest the rising temperature of Earth s surface by reducing the concentrations of greenhouse gases in our atmosphere The symptoms won t clear up unless we act and even then there will likely be lasting effects In Prescriptions for the Climate Crisis Simon Richards looks at the impacts of how we move around power our lives shelter and consume and prescribes possible solutions to lessen the Climate Crisis Rather than dwelling on doom and gloom he suggests pragmatic ideas for individuals and governments in an accesible style
