

NUMB3RS Activity: Code Crackers Episode: "Assassin"

Topic: Simple Codes

Grade Level: 6-12

Objective: Making and breaking codes

Time: about 15 minutes

Introduction

Codes have been used for centuries as a way to communicate in secret. In order for codes to work, you need code makers (cryptologists) and where there are code makers, there are often code breakers (cryptanalysts). There have been many famous codes: some very simple, such as the Caesar substitution cipher (seen below); some very complex, such as RSA encryption which utilizes very large prime numbers and is widely used in electronic commerce. Advanced codes employ the best minds and computer systems in the world.

Discuss with Students

In "Assassin," Agent Don Eppes has intercepted a coded message that he brings to his brother, Charlie, for decrypting. Charlie recognizes the code as a cipher (a code that substitutes letters for other letters or small groups of letters), and realizes that a computer is not needed to break it. An example of a simple cipher is below.

Introduce making a code with a key. In the example below, the key shows what each letter will be replaced with. If you know the key, you can write in the code and read anything written in it. When you replace, or "substitute" a letter, you are using substitution.

For example, in this key, the alphabet has been shifted 9 places. Instead of communicating the entire alphabet shift to someone, you could simply give them a number as the key. The key for this code is 9.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
R	S	T	U	V	W	X	Y	Z	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q

- Using the above key, 9, decode the following message:
YVGG DVI LIFE. [HELP ME DOW]
- What letter appears more than once in the coded message above?
[M] To what uncoded letter does it correspond? [E]

Identifying common letters and words can be used to help break codes. "E" is the most commonly used English letter, followed by "A", "O" and "T". With long messages, you can count each coded letter and make educated guesses about what they stand for.

Student Page Answers: 1. After one night at prison place to be named 2. Getty Center east entrance 3. 25; then it repeats 4. Try each of the 25 keys or look for used letters for a clue. 5. a. Key of 21; b. Key of 41, 57, and 23 6. a. answers may vary; possible answer: assign letters randomly instead of in order b. answers will vary; possible answer: the receiver would need the entire alphabet and which letter went with which.

LOST Opportunities Bronwyn Bevan, Philip Bell, Reed Stevens, Aria Razfar, 2012-07-26 Learning in informal settings is attracting growing attention from policymakers and researchers yet there remains at the moment a dearth of literature on the topic. Thus this volume which examines how science and mathematics are experienced in everyday and out of school time OST settings makes an important contribution to the field of the learning sciences. Conducting research on OST learning requires us to broaden and deepen our conceptions of learning as well as to better identify the unique and common qualities of different learning settings. We must also find better ways to analyze the interplay between OST and school based learning. In this volume scholars develop theoretical structures that are useful not only for understanding learning processes but also for helping to create and support new opportunities for learning whether they are in or out of school or bridging a range of settings. The chapters in this volume include studies of everyday and situated processes that facilitate science and mathematics learning. They also feature new theoretical and empirical frameworks for studying learning pathways that span both in and out of school time and settings. Contributors also examine structured OST programs in which everyday and situated modes of learning are leveraged in support of more disciplined practices and conceptions of science and mathematics. Fortifying much of this work is a leading focus on educational equity, a desire to foster more socially supportive and intellectually engaging science and mathematics learning opportunities for youth from historically non dominant communities. Full of compelling examples and revealing analysis, this book is a vital addition to the literature on a subject with a fast rising profile. *Principal Leadership*, 2006 *Teaching Mathematics Using Popular Culture* Elana Reiser, 2015-11-09 Mathematics teachers often struggle to motivate their students. One way to cultivate and maintain student interest is for teachers to incorporate popular media into their methodology.
