Top Secret Sudoku System Stephen Kerr, 2007-06-18 What if you could solve any Sudoku puzzle with a bare minimum of penciling in and erasing usually one or two penciled in numbers per cell and never more than three no educated guesses and do it in less than half the time it takes you to solve a puzzle now Well we have developed an incredibly simple yet amazingly powerful system which limits the confusion of having four five or more contingencies penciled in for each cell and can solve almost any Sudoku puzzle This is not to say that we have taken the logic or the challenge out of solving Sudoku puzzles we have not You must still be thoughtful thorough and sometimes imaginative but you will have much MORE FUN solving them with much less tedium and frustration

Research and Development in Intelligent Systems XXIV Max Bramer, Frans Coenen, Miltos Petridis, 2007-12-03 An agent in a multi agent system MAS has to generate plans for its individual goal but these plans may conflict with those that are already being scheduled or executed by other agents It must also be able to complete its planning and resolution of these conflicts within a reasonable time to have an acceptable quality plan Although we adopt hierarchical planning HP for example see 7.12 using the decision theoretic planning DTP approach 6 for efficient planning it is not trivial to apply HPO to MAS In HP appropriate abstract plans are selected level by level to maximize the utility U_p where p is the expected plan comprising a sequence of primitive actions However in the MAS context conflicts between agents affect the efficiency and quality of resulting plans When a conflict is found at lower levels an additional sophisticated process for avoiding it conflict resolution must be invoked and some extra actions such as waiting for synchronization and detouring may have to be added to the plan The conflict resolution process may

become costly or fail. Even a single conflict if it is difficult to resolve will result in a plan with considerably lower quality than it otherwise would have. As a result, in multi-agent systems the second or third best plans may result in better overall performance.

Im Gegensatz zu klassischen Webseiten führen Single-Page-Web-Apps keinen Seitenwechsel mehr; durch die Oberfläche wird der dynamische Austausch der HTML-Elemente auf einer einzigen Seite mit JavaScript verändert. Die Implementierung erfolgt mit den Technologien HTML5, CSS3 und JavaScript. Die HTML-Seiten werden zum größten Teil dynamisch im Browser erzeugt. Die Daten werden meist über JSON oder XML mit einem Backend ausgetauscht. Eine Single-Page-Web-App ist über eine URL im Browser universell erreichbar. Eine Installation ist nicht notwendig. Im Unternehmensumfeld reduziert diese Eigenschaft enorm die Kosten für Installation und Verteilung. Viele Benutzer wollen Dienste auf unterschiedlichen Geräten nutzen.
