

LN – 2 – LIGHT : REFLECTION AND REFRACTION:

1. A concave lens has focal length of 20 cm. At what distance from the lens a 5 cm tall object be placed so that it forms an image at 15 cm from the lens? Also calculate the size of the image formed.
2. An object 50 cm tall is placed on the principal axis of a convex lens. Its 20 cm tall image is formed on the screen placed at a distance of 10 cm from the lens. Calculate the focal length of the lens.
3. An object 2 cm high is placed at a distance of 64 cm from a white screen. On placing a convex lens at a distance of 32 cm from the object it is found that a distinct image of the object is formed on the screen. What is the focal length of the convex lens and size of the image formed on the screen? Draw a ray diagram to show the formation of the image in this position of the object with respect to the lens.
4. A convex lens has a focal length of 10 cm. At what distance from the lens should the object be placed so that it forms a real and inverted image 20 cm away from the lens? What would be the size of the image formed if the object is 2 cm high? With the help of a ray diagram show the formation of the image by the lens in this case.
5. The refractive index of glass is 1.50 and the speed of light in air is 3×10^8 ms⁻¹. Calculate the speed of light in glass.
6. At what distance should an object be placed from a convex lens of focal length 18 cm to obtain an image at 24 cm from it on the other side. What will be the magnification produced in this case?
7. How far should an object be placed from a convex lens of focal length 20 cm to obtain its image at a distance of 30 cm from the lens? What will be the height of the image if the object is 6 cm tall?
8. The image of an object placed at 60 cm in front of a lens is obtained on a screen at a distance of 120 cm from it. Find the focal length of the lens. What would be the height of the image if the object is 5 cm high?
9. (a) If the image formed by a lens is diminished in size and erect, for all positions of the object, what type of lens is it?
(b) Name the point on the lens through which a ray of light passes undeviated.
(c) An object is placed perpendicular to the principal axis of a convex lens of focal length 20 cm. The distance of the object from the lens is 30 cm. Find (i) the position (ii) the magnification and (iii) the nature of the image formed.
10. (a) Draw a ray diagram to show the formation of image of an object placed between infinity and the optical centre of a concave lens.
(b) A concave lens of focal length 15 cm forms an image 10 cm from the lens. Calculate

Numerical Relativity Masaru Shibata, 2015-11-05 This book is composed of two parts First part describes basics in numerical relativity that is the formulations and methods for a solution of Einstein's equation and general relativistic matter field equations This part will be helpful for beginners of numerical relativity who would like to understand the content of numerical relativity and its background The second part focuses on the application of numerical relativity A wide variety of scientific numerical results are introduced focusing in particular on the merger of binary neutron stars and black holes

Numerical Methods in Photonics Andrei V. Lavrinenko, Jesper Lægsgaard, Niels Gregersen, Frank Schmidt, Thomas Søndergaard, 2018-09-03 Simulation and modeling using numerical methods is one of the key instruments in any scientific work In the field of photonics a wide range of numerical methods are used for studying both fundamental optics and applications such as design development and optimization of photonic components Modeling is key for developing improved photonic devices and reducing development time and cost Choosing the appropriate computational method for a photonics modeling problem requires a clear understanding of the pros and cons of the available numerical methods Numerical Methods in Photonics presents six of the most frequently used methods FDTD FDFD 1 1D nonlinear propagation modal method Green's function and FEM After an introductory chapter outlining the basics of Maxwell's equations the book includes self contained chapters that focus on each of the methods Each method is accompanied by a review of the mathematical principles in which it is based along with sample scripts illustrative examples of characteristic problem solving and exercises MATLAB is used throughout the text This book provides a solid basis to practice writing your own codes The theoretical formulation is complemented by sets of exercises which allow you to grasp the essence of the modeling tools

Physics of Separated Flows — Numerical, Experimental, and Theoretical Aspects Klaus Gersten, 2013-06-29 This volume contains 37 contributions in which the research work is summarized which has been carried out between 1984 and 1990 in the Priority Research Program Physik abgeloster Stromungen of the Deutsche Forschungsgemeinschaft DFG German Research Society The aim of the Priority Research Program was the intensive research of the whole range of phenomena associated with separated flows Physical models as well as prediction methods had to be developed based on detailed experimental investigations It was in accordance with the main concept of the research program that scientists working on problems of separated flows in different technical areas of application participated in this program The following fields have been represented in the program aerodynamics of wings and bodies aerodynamics of automobiles turbomachinery ship

hydrodynamics hydraulics internal flows heat exchangers bio fluid dynamics aerodynamics of buildings and structures In order to concentrate on problems common in all those areas the emphasis of the program was on basic research dealing with generic geometric configurations showing the fundamental physical phenomena of separated flows The engagement and enthusiasm of all participating scientists are highly appreciated The program was organized such that all researchers met once a year to report on the progress of their work Special thanks ought to go to Prof E A Muller Gottingen Prof H Oertel jun Braunschweig Dr W Schmidt Dornier Dr H W Stock Dornier and Dr B Wagner Dornier who had the functions of referees on those annual meetings Western Range and Livestock, 17 Western States ..., Numerical Rating of Condition, by Months, Range Feed, Cattle, Sheep, Goats, 1965 **Numerical Modeling of Space Plasma Flows** Nikolai V. Marshall, 2011-04-07 Beginning with the development of finite difference equations and leading to the complete FDTD algorithm this is a coherent introduction to the FDTD method the method of choice for modeling Maxwell's equations It provides students and professional engineers with everything they need to know to begin writing FDTD simulations from scratch and to develop a thorough understanding of the inner workings of commercial FDTD software Stability numerical dispersion sources and boundary conditions are all discussed in detail as are dispersive and anisotropic materials A comparative introduction of the finite volume and finite element methods is also provided All concepts are introduced from first principles so no prior modeling experience is required and they are made easier to understand through numerous illustrative examples and the inclusion of both intuitive explanations and mathematical derivations **Neutrons and Related Gamma Ray Problems / Neutronen und Verwandte**

Gammatrahlprobleme Edoardo Amaldi, U. Fano, L. V. Spencer, M. J. Berger, 2012-12-06 661 tures such as occurs in stellar atmospheres and in thermonuclear processes will not be considered 1 Because photoelectric absorption predominates completely at low photon energies and penetration theory is elementary under these conditions attention is directed in this article to photon energies above 20 keV On the high energy side this article does not cover the cascade shower processes which are dealt with in cosmic ray studies In this connection it is recalled that the cascade shower process which involves electrons and positrons besides X rays becomes predominant above 10 MeV in heavy elements and above 100 MeV in light ones Theories developed for the study of cascade showers in cosmic rays rely on assumptions about the probability of

interactions with matter which are adequate only at energies of the order of 1 GeV or more. Below this energy there is a gap in which penetration phenomena are qualitatively known and understood but have not yet been calculated in detail. A few detailed experimental studies which have been made at energies up to 300 MeV will be reviewed in this article. **Vol 03: Mechanics-II : Adaptive Problems Book in Physics for College & High School** SATYAM SIR, 2021-11-26. This book will cover the following chapters: Work, Energy, Power, Energy and Momentum, Rotational Motion. This book contains Basic Math for Physics, Vectors, Units and Measurements. It is divided into several subtopics where it has levelwise easy, medium, and difficult problems on every subtopic. It is a collection of more than 300 Adaptive Physics Problems for IIT JEE Mains and JEE Advanced, NEET, CBSE Boards, NCERT Book, AP Physics, SAT Physics, Olympiad Level questions. Key Features of this book: Subtopic wise Questions with detailed Solutions. Each Topic has Level 1, Level 2 Questions. Chapter wise Test with Level 1, Level 2 Difficulty. NCERT BOARD Level Questions for Practice. Previous Year Questions JEE Mains, Previous Year Questions JEE Advanced, Previous Year Questions NEET, CBSE. More than 300 Questions from Each Chapter. About Author Satyam Sir has graduated from IIT Kharagpur in Civil Engineering and has been teaching Physics for JEE Mains and Advanced for more than 8 years. He has mentored over ten thousand students and continues mentoring in regular classroom coaching. The students from his class have made it into IIT institutions including ranks in top 100. The main goal of this book is to enhance problem solving ability in students. Sir is having hope that you would enjoy this journey of learning physics.
