Startup Finance 2.0 Sam Ghosh, 2025-08-29

Traditional corporate financial theories and tools are based on matured companies with the assumption that the companies are going concerns Going Concern refers to the assumption that a company will continue to operate indefinitely with no intention or necessity of liquidation or cessation of operations in the foreseeable future The problem is that the Going Concern assumption does not hold for startups due to the inherent uncertainty associated with startups Traditional financial education and resources usually meant for analysts and accountants aren t ideal for entrepreneurs They focus on analyzing past data from established businesses not on making forward looking decisions in the uncertain and highly dynamic environment of startups Entrepreneurs also often struggle to prioritize the allocation of resources between seemingly urgent matters and matters that are important for the long term value of the startup Thus this book takes a value oriented approach to startup finance The book is designed to build the financial intuition that an entrepreneur needs to prioritize matters vital for the long term value of the company raise capital and allocate capital for value maximization It also looks at finance from a value creation point of view and covers specific methods especially suited for startups from investment assessment to valuation to fundraising to managing day to day finances

Kent Baker, Jeffrey H. Harris, Ghiyath F. Nakshbendi, 2024-05-08 The Palgrave Handbook of Sovereign Wealth Funds provides a comprehensive detailed analysis of these funds from a multidimensional perspective consisting of 33 chapters divided into seven sections Section I provides background material about SWFs providing a foundation for the remainder of the handbook Section II examines various controversies governance and accountability topics involving SWFs Section III discusses the political legal and tax aspects of SWFs Section IV reviews numerous topics involving SWF management Section V deals with SWFs policies preferences and performance Section VI provides descriptive analyses of SWFs based on country or region It also offers a comparison of SWF similarities and differences across countries Section VII concludes by examining special issues and the future of SWFs This handbook spans the gamut from theoretical to practical while offering the right balance of detailed and user friendly coverage Discussion of relevant research permeates the handbook Although other books are available on SWFs few are as comprehensive or provide a multidimensional perspective from academics and practitioners This handbook fills a gap by showing how SWFs are a growing and dynamic force in international finance **Collaborative Computing: Networking, Applications and Worksharing** Honghao Gao, Xinheng Wang, Wei Wei, Tasos Dagiuklas, 2023-01-24 The two volume set LNICST 460 and 461 constitutes the proceedings of the 18th EAI International Conference on Collaborative Computing Networking Applications and Worksharing CollaborateCom 2022 held in Hangzhou China in October 2022 The 57 full papers presented in the proceedings were carefully reviewed and selected from 171 submissions The papers are organized in the following topical sections Recommendation System Federated Learning and application Edge Computing and Collaborative working Blockchain applications Security and Privacy Protection Deep Learning and application Collaborative working Images processing and recognition *Fatal Abstraction* Darryl Campbell, 2025-04-08 A tech insider explains how capitalism and software development make for such a dangerous mix Software was supposed to radically improve society Outdated mechanical systems would be easily replaced programs like PowerPoint would make information flow more freely social media platforms like Facebook would bring people together and generative AI would solve the world's greatest ills Yet in practice few of the systems we looked to with such high hopes have lived up to their fundamental mandate In fact in too many cases they've made things worse exposing us to immense risk at

the societal and the individual levels How did we get to this point In Fatal Abstraction Darryl Campbell shows that the problem is managerial software programs created and overseen not by engineers but by professional managers with only the most superficial knowledge of technology itself The managerial ethos dominates the modern tech industry from its globe spanning giants all the way down to its trendy startups It demands that corporate leaders should be specialists in business rather than experts in their company s field that they manage their companies exclusively through the abstractions of finance and that profit margins must take priority over developing a quality product that is safe for the consumer and beneficial for society These corporations rush the development process and package cheap unproven potentially dangerous software inside sleek and shiny new devices As Campbell demonstrates the problem with software is distinct from that of other consumer products because of how quickly it can scale to the dimensions of the world itself and because its inner workings resist the efforts of many professional managers to understand it with their limited technical background A former tech worker himself Campbell shows how managerial software fails and when it does what sorts of disastrous consequences ensue from the Boeing 737 MAX crashes to a deadly self driving car to PowerPoint propaganda and beyond Yet just because the tech industry is currently breaking its core promise does not mean the industry cannot change or that the risks posed by managerial software should necessarily persist into the future Campbell argues that the solution is tech workers with actual expertise establishing industry wide principles of ethics and safety that corporations would be forced to follow Fatal Abstraction is a stirring rebuke of the tech industry s current managerial excesses and also a hopeful glimpse of what a world shaped by good software can offer
