use every day *Algorithms of Education* Kalervo N. Gulson, Sam Sellar, P. Taylor Webb, 2022-05-17 A critique of what lies
behind the use of data in contemporary education policy While the science fiction tales of artificial intelligence eclipsing
humanity are still very much fantasies in *Algorithms of Education* the authors tell real stories of how algorithms and
machines are transforming education governance providing a fascinating discussion and critique of data and its role in
education policy *Algorithms of Education* explores how for policy makers today's ever growing amount of data creates the
illusion of greater control over the educational futures of students and the work of school leaders and teachers In fact the
increased datafication of education the authors argue offers less and less control as algorithms and artificial intelligence
further abstract the educational experience and distance policy makers from teaching and learning Focusing on the changing
conditions for education policy and governance *Algorithms of Education* proposes that schools and governments are
increasingly turning to synthetic governance a governance where what is human and machine becomes less clear as a
strategy for optimizing education Exploring case studies of data infrastructures facial recognition and the growing use of
data science in education *Algorithms of Education* draws on a wide variety of fields from critical theory and media studies to
science and technology studies and education policy studies mapping the political and methodological directions for
engaging with datafication and artificial intelligence in education governance According to the authors we must go beyond
the debates that separate humans and machines in order to develop new strategies for and a new politics of education
