Hardware Acceleration of EDA Algorithms Sunil P Khatri,Kanupriya Gulati,2010-03-11 Single threaded software applications have ceased to see significant gains in performance on a general purpose CPU even with further scaling in very large scale integration VLSI technology This is a significant problem for electronic design automation EDA applications since the design complexity of VLSI integrated circuits ICs is continuously growing In this research monograph we evaluate custom ICs old programmable gate arrays FPGAs and graphics processors as platforms for accelerating EDA algorithms instead of the general purpose single threaded CPU We study applications which are used in key time consuming steps of the VLSI design now Further these applications also have different degrees of inherent parallelism in them We study both control dominated EDA applications and control plus data parallel EDA applications We accelerate these applications on these different hardware platforms We also present an automated approach for accelerating certain uniprocessor applications on a graphics processor This monograph compares custom ICs FPGAs and graphics processing units GPUs as potential platforms to accelerate EDA algorithms It also provides details of the programming model used for interfacing with the GPUs

Accelerating MATLAB Performance Yair M. Altman,2014-12-11 The MATLAB programming environment is often perceived as a platform suitable for prototyping and modeling but not for serious applications One of the main complaints is that MATLAB is just too slow Accelerating MATLAB Performance aims to correct this perception by describing multiple ways to greatly improve MATLAB program speed Packed with the **Advancing the use of Eye-Tracking and Pupillometric Data in Complex Environments.** Russell A.
