Mathematical Imagining Christof Weber, 2023-10-10 Imagine a plastic cup lying on the floor Give the cup a nudge so that it begins to roll What does the path it takes look like So begins the journey that Christof Weber takes you on in Mathematical Imagining A Routine for Secondary Classrooms Along the way he makes the case that the ability to imagine manipulate and explain mathematical images and situations is fundamental to all mathematics and particularly important to higher level study Most importantly drawing on years of experiments in his own classroom Weber shows that mathematical imagining is a skill that can be taught efficiently and effectively Mathematical Imagining describes an original routine that gives students space and time to imagine a mathematical situation and then revise discuss and act upon the mental images they create You can use this creative routine to glimpse into your students thinking and discover teaching opportunities while empowering them to create their own mathematics Inside you ll find the following An introduction to the routine including the rationale behind it facilitation guidance and classroom examples Modifications to implement the routine in your classroom even with varying time constraints 37 exercises broken into four categories constructions problem solving reasoning and paradoxes Discussions of the mathematics involved in each exercise including possible follow up questions Instructions on how to create your own exercises beyond the book This one of a kind resource is for secondary teachers looking to inspire student creativity and curiosity deepen their own subject matter knowledge and pedagogical content knowledge and invite all students to access the power of their own mathematical imaginations

A Mathematical Nature Walk John A. Adam, 2011-09-12 How heavy is that cloud Why can you see farther in rain than in fog Why are the droplets on that spider web spaced apart so evenly If you have ever asked questions like these while outdoors and wondered how you might figure out the answers this is a book for you An entertaining and informative collection of fascinating puzzles from the natural world around us A Mathematical Nature Walk will delight anyone who loves nature or math or both John Adam presents ninety six questions about many common natural phenomena and a few uncommon ones and then shows how to answer them using mostly basic mathematics Can you weigh a pumpkin just by carefully looking at it Why can you see farther in rain than in fog What causes the variations in the colors of butterfly wings bird feathers and oil slicks And why are large haystacks prone to spontaneous combustion These are just a few of the questions you ll find inside Many of the problems are illustrated with photos and drawings and the book also has answers a glossary of terms and a list of some of the patterns found in nature About a quarter of the questions can be answered with arithmetic and many of the rest require only precalculus But regardless of math background readers will learn from the informal descriptions of the problems and gain a new appreciation of the beauty of nature and the mathematics that lies
