The Public Relations of Everything Robert E. Brown,2014-10-30 The public relations of everything takes the radical position that public relations is a profoundly different creature than a generation of its scholars and teachers have portrayed it Today it is clearly no longer limited if it ever has been to the management of communication in and between organizations Rather it has become an activity engaged in by everyone and for the most basic human reasons as an act of self creation self expression and self protection The book challenges both popular dismissals and ill informed repudiations of public relations as well as academic and classroom misconceptions In the age of digitization and social media everyone with a smart phone Twitter and Facebook accounts and the will and skill to use them is in the media The PR of everything the ubiquitousness of public relations takes a perspective that is less concerned with ideas of communication and information than with experience and drama a way of looking at public relations inside out upside down and from a micro rather than a macro level Based on a combination of the research of PR practice and critical thinking analysis of theory and founded in the author s extensive corporate experience this book will be invaluable reading for scholars and practitioners alike in Public Relations Communications and Social Media

Innovating Analytics Larry Freed,2013-09-23 How does a CEO manager or entrepreneur begin to sort out what defines and drives a good customer experience and how it can be measured and made actionable If you know how well the customer experience is satisfying your customers and you know how to increase their satisfaction you can then increase sales return visits recommendations loyalty and brand engagement across all channels More reliable and more useful data leads to better decisions and better results *Innovating Analytics* is also about the need for a comprehensive measurement ecosystem to accurately assess and improve the other elements of customer experience This is a time of great change and great opportunity The companies that use the

right tools and make the right assessments of how to satisfy their customers will have the competitive advantage

Innovating Analytics introduces an index that measures a customer's likelihood to recommend and the likelihood to detract. The current concept of the Net Promoter Score (NPS) that has been adopted by many companies during the last decade is no longer accurate, precise, or actionable. This new metric called the Word of Mouth Index (WoMI) has been tested on hundreds of companies and with over 1.5 million consumers over the last two years. Author Larry Freed details the improvement that WoMI provides within what he calls the Measurement Ecosystem. He then goes on to look at three other drivers of customer satisfaction along with word of mouth: customer acquisition, customer loyalty, and customer conversion.

Synthetic Data Jimmy Nassif, Joe Tekli, Marc Kamradt, 2024-01-03. The book concentrates on the impact of digitalization and digital transformation technologies on the Industry 4.0 and smart factories: how the factory of tomorrow can be designed, built, and run virtually as a digital twin, likeness of its real-world counterpart, before the physical structure is actually erected. It highlights the main digitalization technologies that have stimulated the Industry 4.0, how these technologies work and integrate with each other, and how they are shaping the industry of the future. It examines how multimedia data and digital images, in particular, are being leveraged to create fully virtualized worlds in the form of digital twin factories and fully virtualized industrial assets. It uses BMW Group's latest SORDI dataset (Synthetic Object Recognition Dataset for Industry) as the largest industrial images dataset to date and its applications at BMW Group and Idealworks as one of the main explanatory scenarios throughout the book. It discusses the need of synthetic data to train advanced deep learning computer vision models and how such datasets will help create the robot gym of the future: training robots on synthetic images to prepare them to function in the real world.
