Fisher, 2025-07-08 Artificial Intelligence for Academic Libraries provides a clear and dependable guide to the history theory and application of artificial intelligence AI and machine learning ML in academic libraries addressing the needs of librarians staff administrators and other stakeholders Emerging from a long running conversation between an academic librarian and a professor of computer science this book provides readers with a critical perspective on the history present and future of AI in libraries and information services Synthesizing the literature on AI ML and librarianship the authors provide the requisite background to evaluate the impact of these technologies on the information ecosystem The first half of the volume covers the fundamentals of AI notably the divergences between the two major AI paradigms as well as philosophical legal and ethical issues that arise from the use of AI The second half addresses specialized topics including hybrid AIs that bridge the dominant AI paradigms the responsible use of AI in research and learning and suggestions for professional development Artificial Intelligence for Academic Libraries will benefit academic librarians seeking to develop a solid understanding of AI and ML and their likely impact on library operations and services including student and faculty outreach The volume also serves as a pedagogical resource for library and information science students entering this rapidly changing field *The New Empire of AI* Rachel Adams, 2024-11-05 As AI takes hold across the planet and wealthy nations seek to position themselves as global leaders of this new technology the gap is widening between those who benefit from it and those who are subjugated by it As Rachel Adams shows in this hard hitting book growing inequality is the single biggest threat to the transformative potential of AI Not only is AI built on an unequal global system of power it stands poised to entrench existing inequities further consolidating a new age of empire AI s impact on inequality will not be experienced in poorer countries only it will be felt everywhere The effects will be seen in an intensification of international migration as opportunities increasingly concentrate in the hands of wealthier nations in heightened political instability and populist politics and in climate related disasters caused by an industry that is blind to its environmental impact across supply chains We need to act now to address these issues Only if the current inequitable trajectory of AI is halted the incentives changed and the production and use of AI decentralized and decoupled from wealthier nations will AI be able to deliver on its promise to build a better world for all Also available as an audiobook **The Warren Buffett Way, 30th Anniversary Edition** Robert G.
