**Securing Mobile Devices and Technology** Kutub Thakur, Al-Sakib Khan Pathan, 2021-12-16 This book describes the detailed concepts of mobile security. The first two chapters provide a deeper perspective on communication networks while the rest of the book focuses on different aspects of mobile security: wireless networks and cellular networks. This book also explores issues of mobile IoT (Internet of Things) devices for shopping and password management and threats related to these devices. A few chapters are fully dedicated to the cellular technology wireless network. The management of password for the mobile with the modern technologies that helps on how to create and manage passwords more effectively is also described in full detail. This book also covers aspects of wireless networks and their security mechanisms. The details of the routers and the most commonly used Wi-Fi routers are provided with some step-by-step procedures to configure and secure them more efficiently. This book will offer great benefits to the students of graduate and undergraduate classes, researchers, and also practitioners.

**Evaluating Information Retrieval and Access Tasks** Tetsuya Sakai, Douglas W. Oard, Noriko Kando, 2020-09-01 This open access book summarizes the first two decades of the NII Testbeds and Community for Information Access Research (NTCIR). NTCIR is a series of evaluation forums run by a global team of researchers and hosted by the National Institute of Informatics (NII), Japan. The book is unique in that it discusses not just what was done at NTCIR but also how it was done and the impact it has achieved. For example, in some chapters the reader sees the early seeds of what eventually grew to be the search engines that provide access to content on the World Wide Web today's smartphones that can tailor what they show to the needs of their owners and the smart speakers that enrich our lives at home and on the move. We also get glimpses into how new search engines can be built for mathematical formulae or for the digital record of a lived human life. Key to the success of the NTCIR endeavor was early recognition that information access research is an empirical discipline and that evaluation therefore lay at the core of the enterprise. Evaluation is thus at the heart of each chapter in this book. They show, for example, how the recognition that some documents are more important than others has shaped thinking about evaluation design. The thirty-three contributors to this volume speak for the many hundreds of researchers from dozens of countries around the world who together shaped NTCIR as organizers and participants. This book is suitable for researchers, practitioners, and students; anyone who wants to learn about past and present evaluation efforts in information retrieval, information access, and natural language processing, as well as those who want to participate in an evaluation task or even to design and organize one.

**Data sharing for digital markets contestability** Richard Feasey,Alexandre de Streel,2020-09-30 As the European Commission is preparing its Data Act this new CERRE report provides concrete recommendations for effective data sharing governance more specifically when a party has significant incentives not to share data The forthcoming data act should provide better incentives to stimulate two forms of data sharing individual users data sharing and bulk data sharing between firms Data sharing is seen by many as an effective means to safeguard competition in digital markets allowing smaller players to get access to precious data The authors of the CERRE report Richard Feasey and Alexandre de Streel have analysed current EU rules imposing data sharing and conclude these do not provide the comprehensive governance framework needed for data sharing to effectively take place Given the incentives a gatekeeper platform may have not to share data and the potential for this platform to leverage into other markets we recommend imposing an obligation to share data explain Richard Feasey The most important and difficult task for regulators lies in determining the type and scope of data that is to be shared and which organisations should be obliged to share it We conclude that better incentives and governance are needed to stimulate two forms of data sharing in the EU data about individuals and bulk data between firms Regulating recipients as well as donors Regulation for data sharing should not be viewed as being limited to the oversight of a small number of large platforms that might be obliged to share data It also requires strict oversight of potentially a very large number of smaller firms that might seek access to such data Regulators will need to establish an effective and comprehensive system of regulation of both donors and recipients of data to guard against misuse and to ensure trust on all sides Sharing individual users data Over time the sharing or porting of data about individual users data could accumulate and be used for other purposes For this reason the authors recommend that obligations to share data about individual users should be quite extensive and apply to digital platforms which may be described as meeting the gatekeeper minus threshold The report encourages regulators to require the sharing of individual user data without any payment If high transaction costs and uncertain users benefits prevent the effectiveness of this approach policymakers should consider more radical approaches such as allowing the use of an opt out option rather than the current opt in for the sharing of personal data in order to ensure fair competition in digital markets The European Commission should consider provisions in the forthcoming Data Act to enable the use of opt out arrangements for the sharing of personal data to preserve market contestability under certain prescribed conditions Although this may represent some loss of consumer sovereignty over their data such a trade off may need to be made if data sharing arrangements are to achieve their aim of ensuring contestability in digital markets Bulk sharing of user data The competitive

impact of the bulk transfer of aggregate user data could be significant since the volume of data to be shared is likely to be very substantial and may represent a significant proportion of the donor platform's data assets. Since obtaining individual consent from every user would not be feasible in these circumstances, regulators and policymakers should consider other mechanisms to enable the bulk sharing of non-anonymised user data. Alternatively, regulators should consider requiring the platform that controls the data to allow third-party access to the full data set so that third parties may train algorithms or otherwise derive the same sorts of insights from the data that are available to the incumbent. Recipients of aggregated data should be required to pay for the data, with the payment varying according to the volume and value of the data being shared and not simply the costs of implementing the data sharing arrangements or storing the data. The primary concern here is to preserve incentives for both parties in the sharing arrangement to innovate and invest in existing or new digital services to acquire additional data for themselves. The Commission should undertake a study to consider how regulators would establish wholesale prices for data that was to be shared. The challenge ahead. European policymakers should consider legislative changes with the Data Act to enable the sharing of personal data on an opt-out basis under certain narrowly prescribed circumstances and to ensure contestability in digital markets. Finally, data sharing remedies that the report considers arise from the assumption that digital platforms will continue to derive significant market power from their centralised control of big data sets. Regulators and policymakers should also keep an eye on new technologies which might enable a much greater degree of decentralisation and wider distribution of data, thereby removing the very sources of market power which this report has sought to address. This report follows another CERRE research analysing the processes that turn data into economic value for online search, e-commerce and media platforms.
