Can that be Right? A. Franklin, 2012-12-06 In this collection of essays Allan Franklin defends the view that science provides us with knowledge about the world which is based on experimental evidence and on reasoned and critical discussion. In short he argues that science is a reasonable enterprise. He begins with detailed studies of four episodes from the history of modern physics: 1 the early attempts to detect gravity waves 2 how the physics community decided that a proposed new elementary particle 17 keV neutrino did not exist 3 a sequence of experiments on K meson decay and 4 the origins of the Fifth Force hypothesis a proposed modification of Newton's Law of Universal Gravitation. The case studies are then used to examine issues such as how discord between experimental results is resolved calibration of an experimental apparatus and its legitimate use in validating an experimental result and how experimental results provide reasonable grounds for belief in both the truth of physical theories and in the existence of the entities involved in those theories. This book is a challenge to the critics of science both postmodern and constructivist to provide convincing alternative explanations of the episodes and issues discussed. It should be of interest to philosophers historians and sociologists of science and to scientists themselves.

Federal Register , 2012-03 **The Practice of Social Research** Earl R. Babbie, 2020-05-22 Packed with hands on applications Babbie's THE PRACTICE OF SOCIAL RESEARCH 15th Edition equips your students with the tools they need to practically apply research concepts as both researchers and consumers.
