### Science Experiments

Reading Comprehension

Read the passage and answer the questions.

Science experiments are a way to learn about the world around us. They are a way to test a hypothesis or to discover a new fact. Science experiments are a part of the scientific method, which is a way of thinking that is based on evidence and logic.

There are many different types of science experiments. Some are simple and can be done at home, while others are more complex and require special equipment. The most important thing is to follow the steps of the scientific method and to be careful and accurate in your work.

One of the most important steps in the scientific method is to ask a question. This is the first step, and it is the one that starts the whole process. Without a question, there is no need for an experiment.

Next, you need to do some research. This is the second step, and it is important to know what has already been discovered about the topic you are interested in. This will help you to form a hypothesis.

Then, you need to form a hypothesis. This is the third step, and it is a statement that you can test. It is usually a statement that says "If I do this, then that will happen." For example, "If I drop a ball, then it will fall to the ground."
