 Liechtenstein language English abstract This paper is focused on comparing the Capital Asset Pricing Model the Fama
 French Three Factor model and two modified versions of the Fama French Model in their ability to explain excess returns
 The first modified model contains the same explanatory variables as the Fama French Model but with an additional AR 1
 process The second modification contains instead of an additional AR 1 an AR 2 process Evaluated by the adjusted R2 and
 the Akaike information criterion the Fama French model yields a higher model fit than the CAPM The modified Fama French
 Model with an AR 2 process leads to significant results for the twice lagged return in the model in four out of six tested
 portfolios Therefore the in sample regression reveals a higher model fit of the modified Fama French model with AR 2 in
 comparison to the other three models Since the results differ from a regression in the subsequent period the results are most
 likely spurious Nevertheless the authors show the high er model fit of the Fama French Three Factor Model in relation to the
