Ethics of Virtual Reality Michael J. Grabowski, 2024-12-15 In this book Michael Grabowski draws on established theories of ethics to consider critical questions surrounding the growing adoption of virtual reality VR technologies. These questions include who should control and have access to VR its impact on privacy its potential for misrepresentation and bias and how to provide a platform for free expression while mitigating harassment and abuse. Grabowski examines use cases of other digital technologies including social media and artificial intelligence to examine who is helped and harmed by the widespread implementation of VR and how it might transform existing institutions social relationships and communication. Finally Grabowski forecasts the possible futures of VR and what limits if any should be placed on representing the real world or imagining new ones. Scholars of media studies technology studies communication and ethics will find this book of particular interest.

Incompleteness Mobility and Conviviality Francis Nyamnjoh, 2023-12-05 Central to the Jensen Memorial Lectures 2023 is an invitation to take incompleteness seriously in how we imagine relate to and seek to understand a world in perpetual motion. Despite our instinct for and obsession with completeness we are constantly reminded that the sooner one recognises and provides for incompleteness and the conviviality it inspires as the normal way of being the better we are for it. Fluidity compositeness and the capacity to be present in multiple places and forms simultaneously in whole or in fragments are core characteristics of reality and ontology of incompleteness. How would we frame our curiosities and conversations about processes relationships and phenomena with an understanding of the universality of incompleteness and mobility? West and Central Africa for example are regions where it is commonplace to embrace and celebrate incompleteness in nature the suprasensory human beings human actions human inventions and human achievements. The lectures indicate how we could draw inspiration in this regard to inform current clamours for decolonisation and the growing ambivalence about rapid advances in digital technologies artificial intelligence AI in particular as well as with twenty first century concerns about migrants and strangers knocking at the doors of opportunities we feel more entitled to as bona fide citizens and insiders. The lectures draw on the writings of Amos Tutuola as well as from popular ideas of personhood and agency in Africa to make a case for sidestepped and silenced traditions of knowledge. They highlight Africa's possibilities prospects and emergent capacities for being and becoming in tune with the

continent's creativity and imagination. They speak to the nimble-footed, flexible-minded frontier African at the crossroads and junctions of myriad encounters, facilitating creative conversations and challenging regressive logics of exclusionary claims and articulation of identities and achievements. The traditions of knowledge discussed in these lectures do not only speak to Africans but to the world, as the philosophies explored have universal application. The crucial anthropological question of relationality and othering is at the heart of this original and enlightening book. Nyamnjoh cautions the missionaries of decoloniality against the risk of substituting one illusion of completeness with another. For him, incompleteness is the basis of any healthy exchange. He therefore recommends embracing the universality of incompleteness in motion and taking seriously an ancestral tradition of self-extension through creative imagination in this anxious age of artificial intelligence. Forcefully argued and abundantly substantiated with finesse and laughter that run through it, this book will be a milestone by making us rediscover the demands and the magic of fieldwork.

[Multiple Information Source Bayesian Optimization](#) Antonio Candelieri, Andrea Ponti, Francesco Archetti, 2025-10-01. The book provides a comprehensive review of multiple information sources and multi-fidelity Bayesian optimization, specifically focusing on the novel Augmented Gaussian Process methodology. The book is important to clarify the relations and the important differences in using multi-fidelity or multiple information source approaches for solving real-world problems. Choosing the most appropriate strategy depending on the specific problem features ensures the success of the final solution. The book also offers an overview of available software tools; in particular, it presents two implementations of the Augmented Gaussian Process-based Multiple Information Source Bayesian Optimization: one in Python and available as a development branch in BoTorch, and finally a comparative analysis against other available multi-fidelity and multiple information sources optimization tools is presented, considering both test problems and real-world applications. The book will be useful to two main audiences: 1) PhD candidates in Computer Science, Artificial Intelligence, Machine Learning, and Optimization; 2) Researchers from academia and industry who want to implement effective and efficient procedures for designing experiments and optimizing computationally expensive experiments in domains like engineering, design, material science, and biotechnology.

This concise and sober book presents a brief history of AI explaining in clear language the central engineering innovations that have produced the current revolution. It distinguishes between imagined dangers and the very real problems that AI is creating. Spread across seven short and accessible chapters, this book explains the developments behind deep learning and the applications of deep neural networks (DNNs). It addresses both the imagined and actual risks posed by the AI revolution before outlining the elements of a rational public policy on AI, covering topics like tech monopolies, disinformation, bias, hate speech, intellectual property rights, and inequality. Suitable for the general reader, *Understanding the Artificial Intelligence Revolution: Between Catastrophe and Utopia* is the ideal book for anyone seeking a clear and informed introduction to AI.

c't Working with AI c't-Redaktion, 2024-01-24. The special issue of c't KI Praxis provides tests and practical instructions for working with chatbots. It explains why language models make mistakes and how they can be minimised. This not only helps when you send questions and orders to one of the chatbots offered online. If you do not want to or are not allowed to use the cloud services for data protection reasons, for example, you can also set up your own voice AI. The c't editorial team explains where to find a suitable voice model, how to host it locally, and which service providers can host it. The fact that generative AI is becoming increasingly productive harbours both opportunities and risks. Suitable rules for the use of AI in schools, training, and at work help to exploit opportunities and minimise risks.
