Viewpoint-based Flexible Information System Architectures Dmitri Valeri Panfilenko,2021-06-07 Information system architecture ISA specification as a part of software engineering field has been an information systems research topic since the 60 s of the 20th century There have been manifold specification methodologies over the recent decades developed newly or adapted in order to target the domains of software modelling legacy systems steel production and automotive safety Still there exist considerable issues constituting the need for a flexible ISA development e g incomplete methodology for requirements in model driven architectures lacking qualitative methods for thorough definition and usage of viewpoints

Currently existing methods for information system architecture specification usually devise the target architectures either addressing only a part of software life cycles or neglecting less structured information. The method for flexible information system architectures FISA specification uses the viewpoint concept for mediating the domain expert and technical system levels. The FISA method defines construction and application reference models based on the ANSI IEEE Standard 1471 2000 viewpoints with model transformations based on OMG Standard Model Driven Architecture MDA and four different approaches for ISA specification thus providing for flexibility both in construction and refactoring procedures. The development of FISA method has been based on a thorough analysis of the ISA specification method field and constructs a comprehensive procedure and reference engineering models for flexible ISA specification. The genericity of the conceived construction and application procedure models of FISA allows for its usage not only in research but also in industry settings as presented on illustrative scenarios in steel manufacturing and automotive safety. National Journal, 2009-04. *The Composable Enterprise: Agile, Flexible, Innovative* August-Wilhelm Scheer, 2023-11-09. The benefits of digitalisation do not lie in the use of new technologies for existing processes but in organisational changes and new business models. The book highlights the composable enterprise as the guiding principle for successful digital transformation and associated cost reductions and revenue increases. What does it mean? A composable enterprise is organised in a decentralised process oriented way. This allows the enterprise to react quickly to new situations, develop or change processes and business models. The information systems are based on platform architectures. A paradigm shift to monolithic applications. Sector concepts for industry consulting and universities show how organisation and application architectures interlock in the composable enterprise. The reader receives inspiration, a foundation and a compass for the digital transformation of a company to the composable enterprise.
