Eweed, 2025-11-03 You built the killer case flawless logic sexy data slides that could win a corporate beauty pageant And what happened Your customer picked your competitor Or your boss chose his own recycled dusty idea from 2019 Then They explained it with the dumbest reasons you ve ever heard So of course you thought I was two seconds away from calling them complete idiots But here s the twist they weren t being stupid they just ordered for themselves and your dish wasn t on the menu This isn t a normal business book It s what happens when you take behavioral science neuroscience psychology and real business strategy and put them together to answer one simple question how do you actually make people say yes and take action And it s not theory or jargon it s explained with real situations you already know you your boss your customers that colleague whose bad ideas keep getting approved and the real moves entrepreneurs used to turn small ideas into companies everyone now thinks were always going to succeed Because here s the problem what they taught you in business school was expensive fiction Every MBA program every management textbook every consultant deck tells the same fairytale about decision making people spot a problem gather information weigh alternatives and then pick the optimal solution It sounds scientific It sounds professional But it s fantasy

Real life doesn't work like that. This book speaks neuroscience not business school fiction. Your brain actually has two systems making decisions. The first is the emotional side, your ancient survival processor that's been keeping humans alive for millions of years. It's insanely fast, reacts in milliseconds, and it operates completely outside your awareness. It doesn't think, it doesn't do logic; it just fires gut reactions based on feelings. The second is the analytical side, your slow, deliberate, articulate processor. That's the voice in your head that sounds smart and professional. It loves weighing options, building arguments, and writing long explanations for choices you already made. Same brain, two operating systems. So picture it like this: a giant ancient fish, silent, moving toward warm water away from danger, following the group, that's your emotional system. Pure instinct. Then picture a well-dressed general, articulate, strategic, making plans, calculating incentives, presenting frameworks, speaking in full sentences about optimal outcomes. That's your analytical system. This whole book is your invitation to accept one uncomfortable truth: humans don't buy spreadsheets. And by spreadsheets, I mean logic, evidence, numbers, data, all the rational firepower you thought would finally make them say yes. Most of the time, it doesn't. Not your calculation. Not your competitive matrix. Not that slide deck you redesigned seventeen times. Because what actually decides is the fish, not the general. So here's what's coming: where behavioral economics and psychology finally meet Monday morning business decisions. Turn the page, and you'll see why your last pitch really failed and why it had nothing to do with the quality of your logic.

Valuing Data Dewey E. Ray, 2018-05-25. The past decade has seen a dramatic increase in the amount and variety of information that is generated and stored electronically by business enterprises. Storing this increased volume of information has not been a problem to date, but as these information stores grow larger and larger, multiple

challenges arise for senior management namely questions such as How much is our data worth Are we storing our data in the most cost effective way Are we managing our data effectively and efficiently Do we know which data is most important Are we extracting business insight from the right data Are our data adding to the value of our business Are our data a liability What is the potential for monetizing our data and Do we have an appropriate risk management plan in place to protect our data To answer these value based questions data must be treated with the same rigor and discipline as other tangible and intangible assets In other words corporate data should be treated as a potential asset and should have its own asset valuation methodology that is accepted by the business community the accounting and valuation community and other important stakeholder groups

Valuing Data An Open Framework is a first step in that direction Its purpose is to Provide the reader with some background on the nature of data Present the common categories of business data Explain the importance of data management Report the current thinking on data valuation Offer some business reasons to value data Present an open framework along with some proposed methods for valuing data The book does not aim to prescribe exactly how data should be valued monetarily but rather it is a starting point for a discussion of data valuation with the objective of developing a stakeholder consensus which in turn will become accepted standards and practices
