undeniably played a significant role in aiding professionals and students for establishing a solid foundation of knowledge. In addition to the importance of individual technologies, it is necessary to examine what final products emerge as these technologies converge. While consumer electronics such as PCs and smartphones vary, there are common aspects among the semiconductor products that constitute them. Should one seek more comprehensive materials, it often entails a costly purchase of white paper. In this book, we aim to delve into a more in-depth discussion of the semiconductor market with an emphasis on the product perspective. To accomplish this, we will extensively draw upon various academic and market resources. Additionally, in order to foster a comprehensive understanding of the market, it is necessary to have a certain level of familiarity with technical elements. Therefore, some technical explanations alongside the discussions are provided. In this book, we primarily focus on the FAB (Fabrication) domain. This book is divided into three major parts. Part 1 provides an overview of the semiconductor market, covering the definition, significance, supply chain structure, regional characteristics, challenges, and more within the semiconductor industry. Part 2, the major portion of this book, offers a comprehensive explanation of the most widely used types of semiconductor products. Particularly high market share products, notably Microcomponents, APs, and memory semiconductors, will have separate in-depth descriptions provided in the appendix. Finally, Part 3 will outline the general process by which these products are designed, focusing on a typical perspective up to the stage just before Foundry.
