Rough Sets and Current Trends in Computing Shusaku Tsumoto, Roman Slowiński, Jan Komorowski, Jerzy W. Grzymala-Busse, 2004-05-21 In recent years rough set theory has attracted the attention of many researchers and practitioners all over the world who have contributed essentially to its development and applications. We are observing a growing research interest in the foundations of rough sets including the various logical mathematical and philosophical aspects of rough sets. Some relationships have already been established between rough sets and other approaches and also with a wide range of hybrid systems. As a result rough sets are linked with decision system modeling and analysis of complex systems, fuzzy sets, neural networks, evolutionary computing, data mining and knowledge discovery, pattern recognition, machine learning and approximate reasoning. In particular rough sets are used in probabilistic reasoning, granular computing including information granule calculi based on rough mereology, intelligent control, intelligent agent modeling, identification of autonomous systems and process specification. Methods based on rough set theory alone or in combination with other approaches have been discovered with a wide range of applications in such areas as acoustics, bioinformatics, business and finance, chemistry, computer engineering, e.g. data compression, digital image processing, digital signal processing, parallel and distributed computer systems, sensor fusion, fractal engineering, decision analysis and systems, economics, electrical engineering, e.g. control, signal analysis, power systems, environmental studies, informatics, medicine, molecular biology, musicology, neurology, robotics, social science, software engineering, spatial visualization, Web engineering and Web mining.

Concurrent Programming, Open Systems and Formal Methods Jose Meseguer, Carlos A. Varela, Nalini Venkatasubramanian, 2025-09-24 This Festschrift is dedicated to Gul Agha in recognition of his outstanding research and teaching impact. Gul Agha received his undergraduate degree at Caltech in 1977 and his A.M., M.S. and Ph.D. degrees at the University of Michigan, Ann Arbor. His thesis led to the MIT Press book *Actors: A Model of Concurrent Computation in Distributed Systems*, a work cited nearly 5000 times. After researcher and lecturer appointments at MIT and Yale, he moved to the University of Illinois, Urbana-Champaign, where he started as an assistant professor in 1989 and subsequently became a full professor and the founding director of the Open Systems Laboratory. The team's goal is to develop concurrent programming languages and systems that support applications with high performance, fault tolerance or real-time requirements, and this work has been very influential across domains such as Software Engineering, Formal Methods, Programming Languages, Concurrency Theory, Distributed Systems, and Cyber-Physical Systems. Gul Agha is a Fellow of the IEEE and a Fellow of the ACM. Other honors include the IBM Faculty Award, the ONR Young Investigator Award, and the ACM Recognition of Service Award. Over the course of his career, Gul has been a highly impactful mentor and he has collaborated in research and in publications with a wide range of scientists and engineers in academia and in industry.

Computer-Aided Reasoning Matt Kaufmann, Panagiotis Manolios, J Strother Moore, 2012-12-06 Computer Aided Reasoning An Approach is a textbook introduction to computer aided reasoning It can be used in graduate and upper division undergraduate courses on software engineering or formal methods It is also suitable in conjunction with other books in courses on hardware design discrete mathematics or theory especially courses stressing formalism rigor or mechanized support It is also appropriate for courses on artificial intelligence or automated reasoning and as a reference for business and industry Current hardware and software systems are often very complex and the trend is towards increased complexity Many of these systems are of critical importance therefore making sure that they behave as expected is also of critical importance By modeling computing systems mathematically we obtain models that we can prove behave correctly The complexity of computing systems makes such proofs very long complicated and error prone To further increase confidence in our reasoning we can use a computer program to check our proofs and even to automate some of their construction In this book we present A practical functional programming language closely related to Common Lisp which is used to define functions which can model computing systems and to make assertions about defined functions A formal logic in which defined functions correspond to axioms the logic is first order includes induction and allows us to prove theorems about the functions The computer aided reasoning system ACL2 which includes the programming language the logic and mechanical support for the proof process The ACL2 system has been successfully applied to projects of commercial interest including microprocessor modeling hardware verification microcode verification and software verification This book gives a

methodology for modeling computing systems formally and for reasoning about those models with mechanized assistance The practicality of computer aided reasoning is further demonstrated in the companion book Computer Aided Reasoning ACL2 Case Studies Approximately 140 exercises are distributed throughout the book Additional material is freely available from the ACL2 home page on the Web including solutions to the exercises additional exercises case studies from the companion book research papers and the ACL2 system with detailed documentation
