Empire of AI Karen Hao, 2025-05-20 An Instant New York Times Bestseller A bestselling page turner that has made waves not just in Silicon Valley but around the world With *Empire of AI* Hao is fundamentally shaping many people's perceptions and understanding of the company at the center of the AI revolution TIME Magazine TIME100 AI 2025 Excellent and deeply reported Tim Wu The New York Times Startling and intensely researched an essential account of how OpenAI and ChatGPT came to be and the catastrophic places they will likely take us Vulture Hao's reporting inside OpenAI is exceptional and she's persuasive in her argument that the public should focus less on AI's putative sentience and more on its implications for labor and the environment Benjamin Wallace Wells New Yorker From a brilliant longtime AI insider with intimate access to the world of Sam Altman's OpenAI from the beginning an eye-opening account of arguably the most fateful tech arms race in history reshaping the planet in real time from the cockpit of the company that is driving the frenzy When AI expert and investigative journalist Karen Hao first began covering OpenAI in 2019 she thought they were the good guys Founded as a nonprofit with safety enshrined as its core mission the organization was meant its leader Sam Altman told us to act as a check against more purely mercantile and potentially dangerous forces What could go wrong Over time Hao began to wrestle ever more deeply with that question Increasingly she realized that the core truth of this massively disruptive sector is that its vision of success requires an almost unprecedented amount of resources the compute power of high-end chips and the processing capacity to create massive large language models the sheer volume of data that needs to be amassed at scale the humans cleaning up that data for sweatshop wages throughout the Global South and a truly alarming spike in the usage of energy and water underlying it all The truth is that we have entered a new and ominous age of empire only a small handful of globally scaled companies can even enter the field of play At the head of the pack with its ChatGPT breakthrough how would OpenAI resist such temptations Spoiler alert it didn't Armed with Microsoft's billions OpenAI is setting a breakneck pace

chased by a small group of the most valuable companies in human history toward what end not even they can define All this time Hao has maintained her deep sourcing within the company and the industry and so she was in intimate contact with the story that shocked the entire tech industry Altman s sudden firing and triumphant return The behind the scenes story of what happened told here in full for the first time is revelatory of who the people controlling this technology really are But this isn t just the story of a single company however fascinating it is The g forces pressing down on the people of OpenAI are deforming the judgment of everyone else too as such forces do Naked power finds the ideology to cloak itself no one thinks they re the bad guy But in the meantime as Hao shows through intrepid reporting on the ground around the world the enormous wheels of extraction grind on By drawing on the viewpoints of Silicon Valley engineers Kenyan data laborers and Chilean water activists Hao presents the fullest picture of AI and its impact we ve seen to date alongside a trenchant analysis of where things are headed An astonishing eyewitness view from both up in the command capsule of the new economy and down where the real suffering happens Empire of AI pierces the veil of the industry defining our era **Mathematics**

Education in the Age of Artificial Intelligence Philippe R. Richard,M. Pilar Vélez,Steven Van Vaerenbergh,2022-03-09 This book highlights the contribution of artificial intelligence for mathematics education It provides concrete ideas supported by mathematical work obtained through dynamic international collaboration and discusses the flourishing of new mathematics in the contemporary world from a sustainable development perspective Over the past thirty years artificial intelligence has gradually infiltrated all facets of society When it is deployed in interaction with the human designer or user AI certainly raises new ethical questions But as soon as it aims to augment intelligence in a kind of human machine partnership it goes to the heart of knowledge development and the very performance of work The proposed themes and the sections of the book address original issues relating to the creation of AI milieus to work on mathematics to the AI supported learning of mathematics and to the coordination of usual paper pencil techniques and new AI aided educational working spaces The authors of the book and the coordinators of each section are all established specialists in mathematics didactics mathematics and computer science In summary this book is a must read for everyone interested in the teaching and learning of mathematics and it concerns the interaction between the human and the machine in both directions It contains ideas questions and inspiration that invite to take up the challenge of Artificial Intelligence contributing to Mathematical Human Learning **Law and Economics of Justice** Klaus Mathis,Avishalom Tor,2024-04-30 While previous volumes have

examined specific issues and developments such as the coronavirus crisis or digital transformation from a law and economics perspective the anniversary edition returns to the methodological and philosophical fundament of the discipline of law and economics The present book aims to examine these foundations in general and in particular efficiency reciprocity and meritocracy and their relation to law and justice from an interdisciplinary perspective Efficiency Traditionally the economic analysis of law has been guided by the goal of efficiency Economists usually define efficiency as Pareto or Kaldor Hicks

efficiency Any change that makes one member of society better off without anyone else being worse off is a Pareto improvement A change is a Kaldor Hicks improvement if the gainers value their gains more than the losers value their losses with only hypothetical compensation required Reciprocity Economists have traditionally based their models on the self interest hypothesis of homo oeconomicus In this model an individual maximises his own utility without being altruistic or jealous Behavioural economics challenges the self interest hypothesis In fact many people deviate from purely self interested behaviour There are also signs that considerations of fairness and mutual benefit are important in bilateral negotiations and in the functioning of markets Meritocracy The concept of meritocracy refers to a system organisation or society in which people are selected and promoted to positions of success power and influence on the basis of their abilities and merits This means that an individual is able to climb the social ladder through hard work Moreover meritocracy directs the most talented people into the most functionally important positions thereby increasing a society's efficiency However the equalising function of meritocracy has been criticised Rather than reducing inequality meritocracy is seen as the cause of racial economic and social inequality

Robotics, AI, and Humanity Joachim von Braun, Margaret S. Archer, Gregory M. Reichberg, Marcelo Sánchez Sorondo, 2021-02-12 This open access book examines recent advances in how artificial intelligence AI and robotics have elicited widespread debate over their benefits and drawbacks for humanity The emergent technologies have for instance implications within medicine and health care employment transport manufacturing agriculture and armed conflict While there has been considerable attention devoted to robotics AI applications in each of these domains a fuller picture of their connections and the possible consequences for our shared humanity seems needed This volume covers multidisciplinary research examines current research frontiers in AI robotics and likely impacts on societal well being human robot relationships as well as the opportunities and risks for sustainable development and peace The attendant ethical and religious dimensions of these technologies are addressed and implications for regulatory policies on the use and future development of AI robotics technologies are elaborated

Argot and Slang Albert Barrère, 1889 *Artificial Intelligence in Geography* Stan Openshaw, Christine Openshaw, 1997-07-07 This unique work introduces the basic principles of artificial intelligence with applications in geographical teaching and research GIS and planning Written in an accessible non technical and witty style this book marks the beginning of the AI revolution in geography with major implications for teaching and research The authors provide an easy to understand basic introduction to AI relevant to geography There are no special mathematical and statistical skills needed indeed these might well be a hindrance AI is a different way of looking at the world and it requires a willingness to experiment and readers who are unhindered by the baggage of obsolete technologies and outmoded philosophies of science will probably do best The text provides an introduction to expert systems neural nets genetic algorithms smart systems and artificial life and shows how they are likely to transform geographical enquiry A major methodological milestone in geography The first geographical book on artificial intelligence AI No need for previous
