Influence of Recommender Systems on Consumer Behavior Markus Lill, 2025-03-13 In the dynamic landscape of digital platforms recommender systems silently guide our decisions shaping what we watch read and buy But how do these algorithms influence our behavior beyond convenience and personalization This dissertation delves into the psychological undercurrents of recommender systems uncovering how subtle design choices trigger behavioral biases that affect consumer preferences beliefs and decisions Through a series of rigorous field experiments this work explores three critical dimensions of recommender systems item selection ranking and recommendation design It reveals how phenomena like assimilation and contrast effects as well as visual cues such as product badges can subtly yet powerfully steer consumer behavior Challenging traditional recommender system design priorities the findings highlight that similarity can sometimes outweigh diversity and that strategic positioning can defy conventional assumptions about user attention Combining a systematic literature review with empirical evidence from real world settings this dissertation offers insights into the interplay between technology and human cognition It is an essential read for scholars practitioners and platform designers seeking to understand and ethically harness the behavioral dynamics of recommender systems

Advancing Recommender Systems with Graph Convolutional Networks Fan Liu, Liqiang Nie, 2025-03-29 This book systematically examines scalability and effectiveness challenges related to the application of graph convolutional networks GCNs in recommender systems By effectively modeling graph structures GCNs excel in capturing high order relationships between users and items enabling the creation of enriched and expressive representations The book focuses on two overarching problem categories the first area deals with problems specific to GCN based recommendation models including over smoothing noisy neighboring nodes and interpretability limitations The second one encompasses broader challenges in recommendation systems that GCN based methods are particularly well suited to address as the attribute missing problem or feature misalignment Through rigorous exploration of these challenges this book presents innovative GCN based solutions to push the boundaries of recommender system design To this end techniques such as interest aware message passing strategy cluster based collaborative filtering semantic aspects extraction attribute aware attention mechanisms and light graph transformer are presented Each chapter combines theoretical insights with practical implementations and experimental validation offering a comprehensive resource for researchers advanced professionals and graduate students alike

Encyclopedia of Natural Resources - Two-Volume Set Yeqiao Wang, 2014-06-01 With unprecedented attention on global change the current debate revolves around the availability and sustainability of natural

resources and how to achieve equilibrium between what society demands from natural environments and what the natural resource base can provide. A full understanding of the range of issues from the consequences of the changing resource bases to the degradation of ecological integrity and the sustainability of life is crucial to the process of developing solutions to this complex challenge. Authored by world class scientists and scholars, The Encyclopedia of Natural Resources provides an authoritative reference on a broad spectrum of topics such as the forcing factors and habitats of life, their histories, current status and future trends, and their societal connections, economic values and management. The content presents state of the art science and technology development and perspectives of resource management. Written and designed with a broad audience in mind, the entries clearly elucidate the issues for readers at all levels. Volume I Land includes 98 entries that cover the topical areas of renewable and nonrenewable natural resources such as forest and vegetative soil, terrestrial coastal and inland wetlands, landscape structure and function, and change, biological diversity, ecosystem services, protected areas and management, natural resource economics, and resource security and sustainability. In Volume II Water includes 59 entries and Air includes 31 entries. The Water entries cover topical areas such as fresh water, groundwater, water quality, and watersheds, ice and snow, coastal environments, and marine resources and economics. The Air entries cover air pollutants, atmospheric oscillation, circulation patterns, and atmospheric water storage, as well as agroclimatology, climate change, and extreme events. Additional topics in meteorology include acid rain, drought, ozone depletion, water storage, and more. Natural resources represent such a broad scope of complex and challenging topics that a reference book must cover a vast number of subjects in order to be titled an encyclopedia. The Encyclopedia of Natural Resources does just that. The topics covered help readers face current and future issues in the maintenance of clean air and water, as well as the preservation of land resources and native biodiversity.
