Rankings and the Reshaping of Higher Education Ellen Hazelkorn, 2015-03-23 University rankings have gained popularity around the world and are now a significant factor shaping reputation. This second edition updates Ellen Hazelkorn's first comprehensive study of rankings from a global perspective, drawing in new original research and extensive analysis. It is essential reading for policymakers, managers, and scholars. *Barron's 300 Best Buys in College Education* Lucia Solórzano, 1990 *America's Best Colleges*, 2007 **The Student Access Guide to the Best 286 Colleges** Tom Meltzer, 1993 *Optimizing Play* Christopher A. Paul, 2024-05-14 An unexpected take on how games work, what the stakes are for them, and how game designers can avoid the traps of optimization. The process of optimization in games seems like a good thing: who wouldn't want to find the most efficient way to play and win? As Christopher Paul argues in *Optimizing Play*, however, optimization can sometimes risk a tragedy of the commons where actions that are good for individuals jeopardize the overall state of the game for everyone else. As he explains, players inadvertently limit play as they theorycraft, seeking optimal choices. The process of developing a meta, or the most effective tactic available, structures decision-making, causing play to stagnate. A stale meta then creates a perception that a game is solved and may lead players to turn away from the game. Drawing on insights from game studies, rhetoric, the history of science, ecology, and game theory literature, Paul explores the problem of optimization in a range of video games, including *Overwatch*, *FIFA*, *EA Sports FC*, *NBA 2K*, *Clash Royale*, *World of Warcraft*, and *League of Legends*. He also pulls extensively from data analytics in sports where the problem has progressed further and is even more intractable than it is in video games, given the money sports teams invest to find an edge. Finally,

Paul offers concrete and specific suggestions for how games can be developed to avoid the trap set by optimization run amok
