Sale of Offices in the Seventeenth Century Koenraad Wolter Swart,2012-12-06 The French Monarchy was the dominant power of the seventeenth century The French armies were victorious on most battlefields and French political institutions were introduced into many countries Among enemies as well as among friends French literature was admired and French manners were imi tated This glorious period of French history had its seamy aspects however 1 France s military triumphs and cultural achievements did not imply a sound political and social structure One of the most outstanding political abuses was the sale of public offices venalite des offices which had become an official institution of the State Almost all offices civil as well as military from the lowest to the highest were publicly sold either by the officials or by the King himself Sale of offices is not just another form of corruption It had serious political implications because it placed power in the hands of officials who were often incapable and unreliable The bureaucracy one of the fundamental institutions of the absolute monarchy was thus deprived of much of its strength Sale of offices also influenced the social structure of the country because it only gave to wealthy people the opportunity to hold office and excluded other classes Further the creation of new offices added to the burden of the taxpayer and had a disas trous effect on France s financial system Finally the invest ment of a large part of the national wealth in unproductive goods affected unfavorably the economic activity of the country

Lau, 2004-06-17 1 The tenth anniversary of the LOPSTR symposium provided the incentive for this volume LOPSTR started in 1991 as a workshop on logic program synthesis and transformation but later it broadened its scope to logic based program development in general that is program development in computational logic and hence the title of this volume The motivating force behind LOPSTR has been the belief that declarative paradigms such as logic programming are better suited to program development tasks than traditional non declarative ones such as the imperative paradigm Specification synthesis transformation or specialization analysis debugging and verification can all be given logical foundations thus providing a unifying framework for the whole development process In the past 10 years or so such a theoretical framework has indeed begun to emerge Even tools have been implemented for analysis verification and specialization However it is fair to say that so far the focus has largely been on programming in the small So the future challenge is to apply or extend these techniques to programming in the large in order to tackle software engineering in the real world Returning to this volume our aim is to present a collection of papers that reflect significant research efforts over the past 10 years These papers cover the whole development process specification synthesis analysis transformation and specialization as well as semantics and systems

Dirk Hofmann,Gavin J. Seal,Walter Tholen,2014-07-31 Monoidal Topology describes an active research area that after various past proposals on how to axiomatize spaces in terms of convergence began to emerge at the beginning of the millennium It combines Barr s relational presentation of topological spaces in terms of ultrafilter convergence with Lawvere s interpretation of metric spaces as small categories enriched over the extended real half line Hence equipped with a quantale V replacing the reals and a monad T replacing the ultrafilter monad laxly extended from set maps to V valued relations the book develops a categorical theory of T V algebras that is inspired simultaneously by its metric and topological roots The book highlights in particular the distinguished role of equationally defined structures within the given lax algebraic context and presents numerous new results ranging from topology and approach theory to domain theory All the necessary prerequisites in order and category theory are presented in the book
