features and permissions you're not using or don't realize are enabled. Most users discover 10-15 apps with location access they don't remember granting background refresh for apps they haven't opened in months and notifications from apps they ignore. The guide emphasizes selective optimization: keep features providing value, disable features consuming battery without providing proportional benefit. Location access for Maps is appropriate; location access for shopping apps tracking you for advertising is not. You decide which trade-offs align with your priorities. This probably requires technical expertise I don't have. Every procedure includes specific step-by-step instructions with exact Settings navigation paths. Open Settings Privacy.
