critically analyses current thinking which often looks at technological solutions to the challenges posed by climate change and where artificial intelligence is instrumental in fulfilling the promise of ecological capitalism. He instead advocates that we take a closer look at the politics of optimization within and outside managerial perspectives which could reveal that one of the main sources of our repeated failures related to governance and climate change lies not intrinsically in the qualities of the tools we use but in the underlying assumptions with which we design and in the scope of their use. Therefore the book looks at possible solutions for humanity that may lie between the rock of technology and the hard place of nature. That is it asks for a revision in our implicit assumptions for building our tools, critiques the thinking about our relationships with them and re-assesses their use. Richly documented, imaginatively argued and captivantly written, this book explores unexpected entanglements of nature, culture and technology that emerge in AI's unruly and unforeseen trajectories.

George Paul Meiu, Professor of Anthropology, University of Basel. Balasescu develops wide-ranging thick descriptions that provocatively draw together lotus flowers and data banks, snakes and algorithms to delve into how bodies, cultures and power are invisibly ensconced in every aspect of the digital realm.

Susan Ossman, Distinguished Professor of Anthropology, University of California, Riverside. This important work traces the evolution and development of the paradigms that made artificial intelligence possible and perhaps even inevitable.

Guy Nasmyth, Associate faculty, Royal Roads University. Alec Balasescu skillfully broadens our horizons for not just nuanced thinking and diverse ways of knowing but in a fast-changing landscape how we might more consciously choose to act and relate to nature.

Wanda Krause, award-winning author, program head, Global Leadership and associate professor, Royal Roads University.
