Microwave Remote Sensing Of Sea Ice:

Microwave Remote Sensing of Sea Ice ,1994 *Microwave Remote Sensing of Sea Ice* Frank D. Carsey,1992-04-08
Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 68 Human activities in the polar regions have undergone incredible changes in this century Among these changes is the revolution that satellites have brought about in obtaining information concerning polar geophysical processes Satellites have flown for about three decades and the polar regions have been the subject of their routine surveillance for more than half that time Our observations of polar regions have evolved from happenstance ship sightings and isolated harbor icing records to routine global records obtained by those satellites Thanks to such abundant data we now know a great deal about the ice covered seas which constitute about 10% of the Earth s surface This explosion of information about sea ice has fascinated scientists for some 20 years We are now at a point of transition in sea ice studies we are concerned less about ice itself and more about its role in the climate system This change in emphasis has been the prime stimulus for this book Passive Microwave Remote Sensing for Sea Ice Research NASA Science Working Group for the Special Sensor Microwave Imager,1993
Passive Microwave Remote Sensing for Sea Ice Research ,1984 Techniques for gathering data by remote sensors on satellites utilized for sea ice research are summarized Measurement of brightness temperatures by a passive microwave imager converted to maps of total sea ice concentration and to the areal fractions covered by first year and multiyear ice are described Several ancillary observations especially by means of automatic data buoys and submarines equipped with upward looking sonars are needed to improve the validation and interpretation of satellite data The design and performance characteristics of the Navy s Special Sensor Microwave Imager expected to be in orbit in late 1985 are described It is recommended that data from that instrument be processed to a form suitable for research applications and archived in a readily accessible form The sea ice data products required for research purposes are described and recommendations for their archival and distribution to the scientific community are presented NTIS abstract *Passive Microwave Remote Sensing for Sea Ice Research* NASA Science Working Group for the Special Sensor Microwave Imager,1984 Remote Sensing of Sea Ice and Icebergs Simon Haykin,Edward O. Polar Remote Sensing Dan Lubin, Robert Massom, 2006-08-31 The polar regions perhaps more than any other places on Earth give the geophysical scientist a sense of exploration This sensibility is genuine for not only is high latitude work arduous with many locations seldom or never visited but there remains much fundamental knowledge yet to be discovered about how the polar regions interact with the global climate system The range of opportunities for new discovery becomes strikingly clear when we realize that the high latitudes are not one region but are really two vastly different worlds The high Arctic is a frozen ocean surrounded by land and is home to fragile ecosystems and unique modes of human habitation The Antarctic is a frozen continent without regular human habitation covered by ice sheets taller than many mountain ranges and surrounded by the Earth's most forbidding ocean When we consider global change as applied to the Arctic we discuss impacts to a region whose surface and lower atmospheric temperatures are near the triple point of water throughout much of the year The most consistent signatures of climate warming have occurred at northern high latitudes IPCC 2001 and the potential impacts of a few degrees increase in surface temperature include a reduction in sea ice extent a positive feedback to climate warming due to lowering of surface albedo and changes to surface runoff that might affect the Arctic Ocean's salinity and circulation
