Middle Range Theory for Nursing is a textbook designed for theory and research courses in master's and doctoral programs. As described in the 2d edition of the Encyclopedia of Nursing Research, middle range theory is a basic usable structure of ideas less abstract than grand theory and more abstract than empirical generalizations or micro range theory. Middle range theories are developed and grown at the intersection of practice and research to provide guidance for everyday practice and scholarly research rooted in the discipline of nursing. In this revised and updated second edition, the authors will revise the eight theories that were examined in the first edition with published research and practice updates along with any changes in the basic concepts and models. Seven new theories will be added. Each theory is presented by the theorist in a consistent format: purpose of the theory, basic concepts, relationships among the concepts, the model, use of the theory in nursing research and/or practice, conclusions, references. Theories new to the second edition: Symptom Management (Dodd et al), Caring (Swanson), Embodied Language (Liehr et al), Cultural Self-reliance (Lowe), Caregiver Stress (Tsai), Clinical Decision Making (Chase), Moral Reckoning (Nathaniel).

Middle Range Theory for Nursing Mary Jane Smith, Patricia R. Liehr, Roger D. Carpenter, 2023-01-25. Three-time recipient of the AJN Book of the Year Award. The completely revised fifth edition of this authoritative text encompasses the most current middle range theories for graduate nursing students and researchers. User-friendly and consistently organized, it helps readers to understand the connection of research to larger conceptual models in nursing. The fifth edition presents three new theories, a revised chapter on concept building, two published examples demonstrating the concept building process, and a new section on the application of middle range theory that addresses its use for practice and education. Additional new features include the fresh perspectives of a third editor, a two-color design to enhance readability, and discussion questions concluding each chapter. The text describes sixteen middle range theories and elaborates on disciplinary perspectives, providing an organizing framework and evaluating the theory. Each theory is consistently organized by purpose, historical development, primary concepts, the relationships among concepts, and its use in nursing practice and research. Understanding of concepts is enhanced by the book's use of the ladder of abstraction for each theory to explain its relationship to philosophical, conceptual, and empirical theory dimensions. New to the Fifth Edition: Includes three new theories: Inner Strength, Unitary Caring, and Nature Immersion, for a total of 16 theories. A completely new section on application of theory to practice. New chapter on application of middle range theory to education. Extensively revised chapter on building concepts for research. Two-color design to enhance readability. Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher
