Trends in Distributed Systems: Towards a Universal Service Market Claudia Linnhoff-Popien, Heinz-Gerd Hegering, 2006-12-30 USM 2000 is the third event in a series of international IFIP GI conferences on Trends in Distributed Systems Following the venues in Aachen Germany 1996 and Hamburg Germany 1998 this event in Munich considers the trend towards a Universal Service Market USM 2000 The trend towards a universal service market has many origins e g the integration of telecom and data communications the deregulation efforts with respect to telco markets the globalization of information the virtualization of companies the requirement of a short time to market the advances in network technologies the increasing acceptance of e commerce and the increase in mobility This leads to new business to business B2B and business to customer B2C environments that offer both challenges and opportunities to enterprises and end users There is the need for ubiquitous services trading brokering and information management for service market and business models and for enable infrastructures for dynamic collaboration Researchers service vendors and users must cooperate to set up the appropriate requirements for a universal service market and to find solutions with respect to supporting platforms middleware distributed applications and management The basis for these solutions is a common understanding of means for defining creating implementing and deploying the service market Then service market makers service aggregators service auctioneers ISP ASP BPO and customers can freely interact in a dynamic open and universal market place

Information Brokering Across Heterogeneous Digital Data Vipul Kashyap, Amit P. Sheth, 2005-12-11 Information intermediation is the foundation stone of some of the most successful Internet companies and is perhaps second only to the Internet Infrastructure companies On the heels of information integration and interoperability this book on information brokering discusses the next step in information interoperability and integration The emerging Internet economy based on burgeoning B2B and B2C trading will soon demand semantics based information intermediation for its feasibility and success B2B ventures are involved in the rationalization of new vertical markets and construction of domain specific product catalogs This book provides approaches for reuse of existing vocabularies and domain ontologies as a basis for this rationalization and provides a framework based on inter ontology interoperation Infrastructural trade offs that identify optimizations in performance and scalability of web sites will soon give way to information based trade offs as alternate rationalization schemes come into play and the necessity of interoperating across these schemes is realized Information Brokering Across Heterogeneous Digital Data is intended readers are researchers software architects and CTOs advanced product developers dealing with information intermediation issues in the context of e commerce B2B and B2C information technology professionals in various vertical markets e g geo spatial information medicine auto and all librarians interested in information brokering

Data Dissemination in Wireless Computing Environments Kian-Lee Tan, Beng Chin Ooi, 2005-12-08 In our increasingly mobile world the ability to access information on demand at any time and place can satisfy people's information needs as well as confer on them a

competitive advantage The emergence of battery operated low cost and portable computers such as palmtops and PDAs coupled with the availability and exploitation of wireless networks have made possible the potential for ubiquitous computing Through the wireless networks portable equipments will become an integrated part of existing distributed computing environments and mobile users can have access to data stored at information servers located at the static portion of the network even while they are on the move Traditionally information is retrieved following a request response model However this model is no longer adequate in a wireless computing environment First the wireless channel is unreliable and the bandwidth is low compared to the wired counterpart Second the environment is essentially asymmetric with a large number of mobile users accessing a small number of servers Third battery operated portable devices can typically operate only for a short time because of the short battery lifespan Thus clients are expected to be disconnected most of the time To overcome these limitations there has been a proliferation of research efforts on designing data delivery mechanisms to support wireless computing more effectively Data Dissemination in Wireless Computing Environments focuses on such mechanisms The purpose is to provide a thorough and comprehensive review of recent advances on energy efficient data delivery protocols efficient wireless channel bandwidth utilization reliable broadcasting and cache invalidation strategies for clients with long disconnection time Besides surveying existing methods this book also compares and evaluates some of the more promising schemes

Stream Data Management Nauman Chaudhry, Kevin Shaw, 2005-04-14 Researchers in data management have recently recognized the importance of a new class of data intensive applications that requires managing data streams i e data composed of continuous real time sequence of items Streaming applications pose new and interesting challenges for data management systems Such application domains require queries to be evaluated continuously as opposed to the one time evaluation of a query for traditional applications Streaming data sets grow continuously and queries must be evaluated on such unbounded data sets These as well as other challenges require a major rethink of almost all aspects of traditional database management systems to support streaming applications Stream Data Management comprises eight invited chapters by researchers active in stream data management The collected chapters provide exposition of algorithms languages as well as systems proposed and implemented for managing streaming data Stream Data Management is designed to appeal to researchers or practitioners already involved in stream data management as well as to those starting out in this area This book is also suitable for graduate students in computer science interested in learning about stream data management

Mining Sequential Patterns from Large Data Sets Wei Wang, Jiong Yang, 2005-07-26 In many applications e g bioinformatics web access traces system utilization logs etc the data is naturally in the form of sequences It has been of great interests to analyze the sequential data to find their inherent characteristics The sequential pattern is one of the most widely studied models to capture such characteristics Examples of sequential patterns include but are not limited to protein sequence motifs and web page navigation traces In this book we focus on sequential pattern mining To meet different needs

of various applications several models of sequential patterns have been proposed We do not only study the mathematical definitions and application domains of these models but also the algorithms on how to effectively and efficiently find these patterns The objective of this book is to provide computer scientists and domain experts such as life scientists with a set of tools in analyzing and understanding the nature of various sequences by 1 identifying the specific models of sequential patterns that are most suitable and 2 providing an efficient algorithm for mining these patterns Chapter 1 INTRODUCTION Data Mining is the process of extracting implicit knowledge and discovery of interesting characteristics and patterns that are not explicitly represented in the databases The techniques can play an important role in understanding data and in capturing intrinsic relationships among data instances Data mining has been an active research area in the past decade and has been proved to be very useful

Information and Database Quality Mario G. Piattini, Coral Calero, Marcela F. Genero, 2012-12-06

In a global and increasingly competitive market where organizations are driven by information the search for ways to transform data into true knowledge is critical to a business's success Few companies however have effective methods of managing the quality of this information Because quality is a multidimensional concept its management must consider a wide variety of issues related to information and data quality Information and Database Quality is a compilation of works from research and industry that examines these issues covering both the organizational and technical aspects of information and data quality Information and Database Quality is an excellent reference for both researchers and professionals involved in any aspect of information and database research

Fuzzy Database Modeling with XML

Zongmin Ma, 2006-06-15 Fuzzy Database Modeling with XML aims to provide a single record of current research and practical applications in the fuzzy databases This volume is the outgrowth of research the author has conducted in recent years Fuzzy Database Modeling with XML introduces state of the art information to the database research while at the same time serving the information technology professional faced with a non traditional application that defeats conventional approaches The research on fuzzy conceptual models and fuzzy object oriented databases is receiving increasing attention in addition to fuzzy relational database models With rapid advances in network and internet techniques as well the databases have been applied under the environment of distributed information systems It is essential in this case to integrate multiple fuzzy database systems Since databases are commonly employed to store and manipulate XML data additional requirements are necessary to model fuzzy information with XML Secondly this book maps fuzzy XML model to the fuzzy databases Very few efforts at investigating these issues have thus far occurred Fuzzy Database Modeling with XML is designed for a professional audience of researchers and practitioners in industry This book is also suitable for graduate level students in computer science

Advanced Signature Indexing for Multimedia and Web Applications Yannis Manolopoulos, Alexandros Nanopoulos, Eleni Tousidou, 2012-09-08

Advanced Signature Indexing for Multimedia and Web Applications presents the latest research developments in signature based indexing and query processing specifically in multimedia and Web domains

These domains now demand a different designation of hashing information in bit strings i.e signatures and new indexes and query processing methods The book provides solutions to these issues and addresses the resulting requirements which are not adequately handled by existing approaches Examples of these applications include searching for similar images representing multi theme layers in maps recommending products to Web clients and indexing large Web log files Special emphasis is given to structure description implementation techniques and clear evaluation of operations performed from a performance perspective Advanced Signature Indexing for Multimedia and Web Applications is an excellent reference for professionals involved in the development of applications in multimedia databases or the Web and may also serve as a textbook for advanced level courses in database and information retrieval systems **Frontiers of WWW Research and**

it relates to database research this book is an excellent introduction to Ph D who wish to further pursue their research in the data quality area It is also an excellent theoretical introduction to IT professionals who wish to gain insight into theoretical results in the technically oriented data quality area and apply some of the key concepts to their practice **Data Streams**

Charu C. Aggarwal,2007-04-03 This book primarily discusses issues related to the mining aspects of data streams and it is unique in its primary focus on the subject This volume covers mining aspects of data streams comprehensively each contributed chapter contains a survey on the topic the key ideas in the field for that particular topic and future research directions The book is intended for a professional audience composed of researchers and practitioners in industry This book is also appropriate for advanced level students in computer science *Advances in Digital Government* William J. McIver Jr.,Ahmed K. Elmagarmid,2008-01-20 *Advances In Digital Government* presents a collection of in depth articles that addresses a representative cross section of the matrix of issues involved in implementing digital government systems These articles constitute a survey of both the technical and policy dimensions related to the design planning and deployment of digital government systems The research and development projects within the technical dimension represent a wide range of governmental functions including the provisioning of health and human services management of energy information multi agency integration and criminal justice applications The technical issues dealt with in these projects include database and ontology integration distributed architectures scalability and security and privacy The human factors research emphasizes compliance with access standards for the disabled and the policy articles contain both conceptual models for developing digital government systems as well as real management experiences and results in deploying them *Advances In Digital Government* presents digital government issues from the perspectives of different communities and societies This geographic and social diversity illuminates a unique array of policy and social perspectives exposing practitioners to new and useful ways of thinking about digital government **The Fractal Structure of Data Reference** Bruce McNutt,2005-11-24 The architectural concept of a memory hierarchy has been immensely successful making possible today s spectacular pace of technology evolution in both the volume of data and the speed of data access Its success is difficult to understand however when examined within the traditional memoryless framework of performance analysis The memoryless framework cannot properly reflect a memory hierarchy s ability to take advantage of patterns of data use that are transient The *Fractal Structure of Data Reference Applications to the Memory Hierarchy* both introduces and justifies empirically an alternative modeling framework in which arrivals are driven by a statistically self similar underlying process and are transient in nature The substance of this book comes from the ability of the model to impose a mathematically tractable structure on important problems involving the operation and performance of a memory hierarchy It describes events as they play out at a wide range of time scales from the operation of file buffers and storage control cache to a statistical view of entire disk storage applications Striking insights are obtained about how memory hierarchies work and how to exploit them to best advantage

The emphasis is on the practical application of such results The Fractal Structure of Data Reference Applications to the Memory Hierarchy will be of interest to professionals working in the area of applied computer performance and capacity planning particularly those with a focus on disk storage The book is also an excellent reference for those interested in database and data structure research **Privacy-Preserving Data Mining** Charu C. Aggarwal, Philip S. Yu, 2008-06-10

Advances in hardware technology have increased the capability to store and record personal data about consumers and individuals causing concerns that personal data may be used for a variety of intrusive or malicious purposes Privacy Preserving Data Mining Models and Algorithms proposes a number of techniques to perform the data mining tasks in a privacy preserving way These techniques generally fall into the following categories data modification techniques cryptographic methods and protocols for data sharing statistical techniques for disclosure and inference control query auditing methods randomization and perturbation based techniques This edited volume contains surveys by distinguished researchers in the privacy field Each survey includes the key research content as well as future research directions Privacy Preserving Data Mining Models and Algorithms is designed for researchers professors and advanced level students in computer science and is also suitable for industry practitioners
