Emerging Trends and Applications of the Internet of Things Kocovic, Petar, Behringer, Reinhold, Ramachandran, Muthu, Mihajlovic, Radomir, 2017-03-16 The widespread availability of technologies has increased exponentially in recent years. This ubiquity has created more connectivity and seamless integration among technology devices. *Emerging Trends and Applications of the Internet of Things* is an essential reference publication featuring the latest scholarly research on the surge of connectivity between computing devices in modern society as well as the benefits and challenges of this. Featuring extensive coverage on a broad range of topics such as cloud computing, spatial cognition, and ultrasonic sensing, this book is ideally designed for researchers, professionals, and academicians seeking current research on upcoming advances in the Internet of Things. *IoT* **Handheld Computing for Mobile Commerce: Applications, Concepts and Technologies** Hu, Wen-Chen, Zuo, Yanjun, 2010-02-28 This book looks at theory, design, implementation, analysis, and application of handheld computing under four themes: handheld computing for mobile commerce, handheld computing research and technologies, wireless networks, and handheld mobile security and handheld images and videos. Provided by publisher **FCC Record** United States. Federal Communications Commission, 2016 **Cognitive Wireless Communication Networks** Ekram Hossain, Vijay K. Bhargava, 2007-10-23 A Brief Journey through Cognitive Wireless Communication Networks Ekram Hossain, University of Manitoba, Winnipeg, Canada; Vijay Bhargava, University of British Columbia, Vancouver, Canada. Introduction: Cognitive radio has emerged as a promising technology for maximizing the utilization of the limited radio bandwidth while accommodating the increasing amount of services and applications in wireless networks. A cognitive radio (CR) transceiver is able to adapt to the dynamic radio environment and the network parameters to maximize the utilization of the limited radio resources while providing flexibility in wireless access. The key features of a CR transceiver are awareness of the radio environment in terms of spectrum usage, power spectral density of transmitted/received signals, wireless protocol signaling, and intelligence. This intelligence is achieved through learning for adaptive tuning of system parameters such as transmit power, carrier frequency, and modulation strategy at the physical layer and higher layer protocol parameters. Development of cognitive radio technology has to deal with technical and practical considerations which are highly multidisciplinary as well as regulatory requirements. There is an increasing interest in this technology among the researchers in both academia and industry, and the spectrum policy makers. The key enabling techniques for cognitive radio networks, also referred to as dynamic spectrum access networks, are wideband signal processing techniques for digital radio, advanced wireless communications methods, artificial intelligence, and machine learning techniques, and cognitive radio-aware adaptive wireless mobile networking protocols. **Maximum PC**, 2003-03 Maximum PC is the magazine that every computer fanatic, PC gamer, or content creator must read.
