High-Frequency Seafloor Acoustics Darrell Jackson, Michael Richardson, 2007-08-02 The efficacy of sound to penetrate the seas made acoustic systems in the past century the leading tools for sensing objects in and measuring properties of the seas For over sixty years The United States Office of Naval Research ONR has been a major sponsor of undersea research and development at universities national laboratories and industrial organizations Appropriately ONR is the sponsor of this monograph series The intent of the series is to summarize recent accomplishments in and to outline perspectives for underwater acoustics in specific fields of research The general field has escalated in importance and spread broadly with richness and depth of understanding It has also quite naturally become more specialized The goal of this series is to present monographs that critically review both past and recent accomplishments in order to address the shortcomings in present understanding In this way these works will bridge the gaps in understanding among the specialists and favorably color the direction of new research and development Each monograph is intended to be a stand alone advanced contribution to the field We trust that the reader will also find that each is a critical

introduction to related specialized topics of interest as well **Energy Security and Sustainability** Amritanshu Shukla, Atul Sharma, 2016-10-03 There has been ever increasing interest in understanding the various aspects of available resources and production in terms of need and supply conservation and environmental impacts and so on From the current energy scenario it is very clear that there are serious challenges related in achieving energy sustainability and security worldwide The aim of this book is to present an overview of progress made towards energy sustainability addressing concerns regarding carbon emission and clean energy resources Keeping this in mind the book has chapters on all major energy sources which are being utilized at present along with those having potential prospects for future *Petroleum and Marine Technology Information Guide* J. Muscle Contraction and Cell Motility Haruo Sugi, 2016-11-03 This book provides a comprehensive overview of the current progress in muscle contraction and cell motility research It discusses structural mechanical and biochemical characteristics of skeletal cardiac and smooth muscles and cell motility The experimental objects of the studies described in this volume extend from humans to molecules A distinct feature of this volume is that in some chapters evidence against the textbook view is presented showing how well established dogma can be denied by an unexpected discovery This book is as interesting as it is informative for general readers and young scientists alike and it is sure to inspire both to challenge the enticing mysteries that still remain in this exciting research field Seismic Facies and Sedimentary Processes of Submarine Fans and Turbidite Systems Paul Weimer, Martin H. Link, 2013-11-11 The Frontiers in Sedimentary Geology series was established for the student the researcher and the applied scientist to enhance their potential to stay abreast of the most recent ideas and developments and to become familiar with certain topics in the field of sedimentary geology This series deals with subjects that are in the forefront of both scientific and economic interests The treatment of a subject in an individual volume therefore should be a combination of topical regional and interdisciplinary approaches The interdisciplinary aspects are becoming more and more important because most studies dealing with the natural sciences cannot effectively stand alone Although this thrust may sound simple in reality it is not basically because each discipline has developed its own jargon and definitions often terms Communication among disciplines is a major issue and can be accomplished more constructively when people with different backgrounds join together at the same symposium and can read from the same volume rather than confining themselves within the world of their own specialty meetings and journals

Books in this series provide this connective link between disciplines Each book in this series provides a continuous and connected flow of concepts throughout the volume by the use of introductory chapters that outline a topic to help the reader grasp its problems and to understand the contributions that follow

Lithofacies Paleogeography and Geological Survey of Shale Gas Chuanlong Mou, Xiuping Wang, Qiyu Wang, Xiangying Ge, Bowen Zan, Kenken Zhou, Xiaowei Chen, Wei Liang, 2023-04-06 This is an open access book This book presents new theory and methods on compiling lithofacies paleogeographic maps as a key tool for guiding geological survey on shale gas The fundamental goal of the shale gas geological survey is to find the desert area It is therefore suggested that the lithofacies paleogeographic study and the technique of mapping should be a solid scientific basis for shale gas exploration It takes Ordovician Wufeng Silurian Longmaxi Formation in Sichuan Basin and its adjacent area as an example to illustrate how to find the desert area of shale gas in geological survey phase by compiling lithofacies paleogeographic map It is a valuable reference for both scientific research and teaching courses in the fields of sedimentary lithofacies paleogeography stratigraphy and oil and gas
