Edible Films and Coatings Maria Pilar Montero Garcia, M. Carmen Gómez-Guillén, M. Elvira López-Caballero, Gustavo V. Barbosa-Cánovas, 2016-09-19 The search for better strategies to preserve foods with minimal changes during processing has been of great interest in recent decades. Traditionally edible films and coatings have been used as a partial barrier to moisture, oxygen, and carbon dioxide through selective permeability to gases as well as improving mechanical handling properties. The advances in this area have been breathtaking and in fact their implementation in the industry is already a reality. Even so, there are still new developments in various fields and from various perspectives worth reporting.

Edible Films and Coatings: Fundamentals and Applications discusses the newest generation of edible films and coatings that are being especially designed to allow the incorporation and/or controlled release of specific additives by means of nanoencapsulation, layer-by-layer assembly, and other promising technologies. Covering the latest novelties in research conducted in the field of edible packaging, it considers state-of-the-art innovations in coatings and films, novel applications, particularly in the design of gourmet foods, new advances in the incorporation of bioactive compounds, and potential applications in agronomy, an as yet little explored area which could provide considerable advances in the preservation and quality of foods in the field.

Combat-Ready Kitchen Anastacia Marx de Salcedo, 2015-08-04 Americans eat more processed foods than anyone else in the world. We also spend more on military research. These two seemingly unrelated facts are inextricably linked. If you ever wondered how ready-to-eat foods infiltrated your kitchen, you'll love this entertaining romp through the secret military history of practically everything you buy at the supermarket. In a nondescript Boston suburb, in a handful of low buildings buffered by trees and a lake, a group of men and women spend their days researching, testing, tasting, and producing the foods that form the bedrock of the American diet. If you stumbled into the facility, you might think the technicians dressed in lab coats and the shiny kitchen equipment belonged to one of the giant food conglomerates responsible for your favorite brand of frozen pizza or microwavable breakfast burritos. So you'd be surprised to learn that you've just entered the U.S. Army Natick Soldier Systems Center, ground zero for the processed food industry. Ever since Napoleon, armies have sought better ways to preserve, store, and transport food for battle. As part of this quest, although most people don't realize it, the U.S. military spearheaded the invention of energy bars, restructured meat, extended-life bread, instant coffee, and much more. But there's been an insidious mission creep because the military enlisted industry huge corporations such as ADM, ConAgra, General Mills, Hershey, Hormel, Mars, Nabisco, Reynolds, Smithfield, Swift, Tyson, and Unilever to help develop and manufacture food for soldiers on the front line. Over the years, combat rations or the key technologies used in engineering them have ended up dominating grocery store shelves and refrigerator cases: TV dinners, the cheese powder in snack foods, cling wrap. The list is almost endless. Now food writer

Anastacia Marx de Salcedo scrutinizes the world of processed food and its long relationship with the military unveiling the twists turns successes failures and products that have found their way from the armed forces and contractors laboratories into our kitchens In developing these rations the army was looking for some of the very same qualities as we do in our hectic fast paced twenty first century lives portability ease of preparation extended shelf life at room temperature affordability and appeal to even the least adventurous eaters In other words the military has us chowing down like special ops What is the effect of such a diet eaten as it is by soldiers and most consumers day in and day out year after year We don t really know We re the guinea pigs in a giant public health experiment one in which science and technology at the beck and call of the military have taken over our kitchens
