No Words for Feelings Olivier Luminet, Kristy Nielson, Nathan Ridout, 2024-08-23 Alexithymia is a multifaceted construct that is characterized by several facets including difficulties identifying one's feelings difficulties describing one's feelings to others and an externally focused utilitarian cognitive style In the long term higher alexithymia scores represent risks factors for poorer mental and physical health outcomes There is however a lack of systematic understanding of the underlying processes that can explain these vulnerabilities This book shows that the facets of alexithymia influence several aspects of how one perceives and responds to neutral and emotional situations by impacting multiple cognitive processes attention appraisals memory language and behavior The effects are influenced by context with some situations leading to deficits in emotion responding and others that contribute to emotional over responding The book shows the importance of drawing better connections amongst multiple processes toward disentangling them and revealing where early processes have impacts on later processes A lack of correspondence between processes as well as amongst

alexithymia facets is expected to lead to ineffective and inflexible emotion regulation thereby posing elevated risks for physical and mental illness The chapters in this book were originally published as a special issue of Cognition and Emotion
