Agricultural mechanization and agricultural transformation Diao, Xinshen, Silver, Jed, Takeshima, Hiroyuki, 2016-04-29 A renewed focus on agriculture's potential contribution to economic transformation in Africa has resulted in increased attention paid to agricultural mechanization African agriculture still relies predominantly on human muscle power despite anecdotal evidence on urbanization and rising rural wages in contrast to other developing regions that have experienced rapid increases in agricultural mechanization during the past few decades Past state led mechanization pushes in Africa often failed due to insufficient understanding of the nature of demand for mechanization technologies among farmers and insufficient knowledge of private sector functions This background paper reviews the factors likely to influence farmer demand for mechanization in Africa and details different existing and potential mechanization supply models Although an empirical analysis of mechanization demand and the effectiveness of supply chains is beyond the scope of this paper in part due to data limitations this paper suggests that demand for mechanization may be emerging in some parts of Africa It also

suggests that private sector driven supply models are better positioned to meet this demand than direct government involvement and certain types of subsidized programs The paper then identifies possible areas for government support to complement private sector leadership in developing mechanization supply chains Nevertheless significant further research is required to better understand the changing nature of mechanization demand in Africa and the extent and effectiveness of different supply models in meeting it *Power Farming in Australia and New Zealand Technical Manual*, 1987 *Harvest Loss in China* Xue Qu, Daizo Kojima, Laping Wu, Mitsuyoshi Ando, 2024-12-27 This open access book examines food security in China with a specific focus on rice harvesting As the most populous agricultural developing country China's food security is closely related to the world's food security An urgent issue internationally data show that every year about one third of food is lost and wasted before it even reaches the market mainly in less developed countries To this end halving the amount of food loss and waste is one of the Sustainable Development Goals In 2021 the Chinese government issued the Anti Food Waste Law of the People's Republic of China placing a high priority on food loss reduction Rice one of the major staple foods has also received a higher priority in government policy as it has been deemed required to be absolutely safe In China rice farmers rely heavily on outsourcing services to complete harvesting which has led to the rapid development of mechanical harvesting This book shows that the essence of outsourcing services is a principal agent relationship in which there is a potential moral hazard which is considered detrimental to harvest losses The book analyses the effect of the moral hazard in harvest outsourcing services on rice harvest losses from this principal agent theoretical perspective Using the latest nationwide farmer survey it empirically demonstrates the moral hazard in agricultural outsourcing services and its negative impact on harvest losses providing suggestions for food loss reduction in China and similar developing countries where agricultural outsourcing services are developing rapidly Relevant to social science researchers working in areas of food security in connection with the SDGs and to scholars studying development in China more generally this is a timely contribution confronting possible means of food loss reduction in the developing world particularly in the East and globally
