Spaces of Teaching and Learning Robert A. Ellis, Peter Goodyear, 2018-02-19 This integrated collection of perspectives on the spaces of teaching and learning uses learning space to place educational practice in context It considers the complex relationships involved in the design management and use of contemporary learning spaces It sheds light on some of the problems of connecting the characteristics of spaces to the practices and outcomes of teaching and learning The contributions show how research into learning spaces can inform broader educational practices and how the practices of teaching learning and design can inform research The selection of chapters demonstrates the value of gathering together multiple sources of evidence viewed through different epistemological lenses in order to push the field forward in a timely fashion The book provides both a broad review of current practices as well as a deep dive into particular educational and epistemological challenges that the various approaches adopted entail Contrasts and commonalities between the different approaches emphasise the importance of developing a broad robust evidence base for practice in context This is the inaugural book in the series Understanding Teaching Learning Practice

International Handbook of Interpretation in Educational Research Paul Smeyers, David Bridges, Nicholas C. Burbules, Morwenna Griffiths, 2015-01-06 This handbook focuses on the often neglected dimension of interpretation in educational research It argues that all educational research is in some sense interpretive and that understanding this issue belies some usual dualisms of thought and practice such as the sharp dichotomy between qualitative and quantitative research Interpretation extends from the very framing of the research task through the sources which constitute the data the process of their recording representation and analysis to the way in which the research is finally or provisionally presented The thesis of the handbook is that interpretation cuts across the fields both philosophically organizationally and methodologically By covering a comprehensive range of research approaches and methodologies the handbook gives early career researchers what they need to know in order to decide what particular methods can offer for various educational research contexts fields An extensive overview includes concrete examples of different kinds of research not limited for example to teaching and learning examples as present in the Anglo Saxon tradition but including as well what in the German Continental tradition is labelled p dagogisch examples from child rearing and other contexts of non formal education with full description and explanation of why these were chosen in particular circumstances

and reflection on the wisdom or otherwise of the choice combined in each case with consideration of the role of interpretation in the process The handbook includes examples of a large number of methods traditionally classified as qualitative interpretive and quantitative used across the area of the study of education Examples are drawn from across the globe thus exemplifying the different opportunities and constraints that educational research has to confront in different societies
