Multivariate And Mixture Distribution Rasch Models Multivariate And Mixture Distribution Rasch Models:

Multivariate and Mixture Distribution Rasch Models Matthias Davier, Claus H. Carstensen, 2007-12-15 This volume gathers together a set of extensions of the Rasch model one of the most prominent models for measurement in educational research and social science developed by Danish mathematician Georg Rasch The idea for this volume emerged during a meeting of the Psychometric Society in Monterey CA At that meeting friends and colleagues discussed news about the impending retirement of Dr Jurgen Rost an important innovator and mentor in this field To recognize Jurgen's contributions we decided to produce a collection of research on extending the Rasch model as well as embedding the Rasch model in more complex statistical models an area that is receiving broad interest in many fields of social sciences at the current time This collection contains 22 chapters by recognized international experts in the field

The contributions cover topics ranging from general model extensions to application in fields as diverse as cognition personality organizational and sports psychology and health sciences and education The Rasch model is designed for categorical data often collected as examinee responses to multiple tasks such as cognitive items from psychological tests or from educational assessments The Rasch model's elegant mathematical form is suitable for extensions that allow for greater flexibility in handling complex samples of examinees and collections of tasks from different domains In these extensions the Rasch model is enhanced by additional structural elements that account either for differences between diverse populations or for differences among observed variables

Advances in Latent Variable Mixture Models Gregory R. Hancock, Karen M. Samuelsen, 2007-11-01 The current volume *Advances in Latent Variable Mixture Models* contains chapters by all of the speakers who participated in the 2006 CILVR conference providing not just a snapshot of the event but more importantly

chronicling the state of the art in latent variable mixture model research The volume starts with an overview chapter by the CILVR conference keynote speaker Bengt Muthén offering a lay of the land for latent variable mixture models before the volume moves to more specific constellations of topics Part I Multilevel and Longitudinal Systems deals with mixtures for data that are hierarchical in nature either due to the data's sampling structure or to the repetition of measures of varied types over time Part II Models for Assessment and Diagnosis addresses scenarios for making judgments about individuals' state of knowledge or development and about the instruments used for making such judgments Finally Part III Challenges in Model Evaluation focuses on some of the methodological issues associated with the selection of models most accurately representing the processes and populations under investigation It should be stated that this volume is not intended to be a first exposure to latent variable methods Readers lacking such foundational knowledge are encouraged to consult primary and/or secondary didactic resources in order to get the most from the chapters in this volume Once armed with the basic understanding of latent variable methods we believe readers will find this volume incredibly exciting

Handbook of Diagnostic Classification Models Matthias von Davier,Young-Sun Lee,2019-10-11 This handbook provides an overview of major developments around diagnostic classification models DCMs with regard to modeling estimation model checking scoring and applications It brings together not only the current state of the art but also the theoretical background and models developed for diagnostic classification The handbook also offers applications and special topics and practical guidelines how to plan and conduct research studies with the help of DCMs Commonly used models in educational measurement and psychometrics typically assume a single latent trait or at best a small number of latent variables that are aimed at describing individual differences in observed behavior While this allows simple rankings of test takers along one or a few dimensions it does not provide a detailed picture of strengths and weaknesses when assessing complex cognitive skills DCMs on the other hand allow the evaluation of test taker performance relative to a potentially large number of skill domains Most diagnostic models provide a binary mastery non mastery classification for each of the assumed test taker attributes representing these skill domains Attribute profiles can be used for formative decisions as well as for summative purposes for example in a multiple cut off procedure that requires mastery on at least a certain subset of skills The number of DCMs discussed in the literature and applied to a variety of assessment data has been increasing over the past decades and their appeal to researchers and practitioners alike continues to grow These models have been used in English language assessment international large scale assessments and for feedback for practice exams in preparation of college admission testing just to name a few Nowadays technology based assessments provide increasingly rich data on a

multitude of skills and allow collection of data with respect to multiple types of behaviors Diagnostic models can be understood as an ideal match for these types of data collections to provide more in depth information about test taker skills and behavioral tendencies *Principles and Methods of Test Construction* Karl Schweizer,Christine DiStefano,2017-06-12
