Music And Connectionism:

Music and Connectionism Peter M. Todd, D. Gareth Loy, 1991 Annotation As one of our highest expressions of thought and creativity music has always been a difficult realm to capture model and understand The connectionist paradigm now beginning to provide insights into many realms of human behavior offers a new and unified viewpoint from which to investigate the subtleties of musical experience Music and Connectionism provides a fresh approach to both fields using the techniques of connectionism and parallel distributed processing to look at a wide range of topics in music research from pitch perception to chord fingering to composition The contributors leading researchers in both music psychology and neural networks address the challenges and opportunities of musical applications of network models The result is a current and thorough survey of the field that advances understanding of musical phenomena encompassing perception cognition composition and performance and in methods for network design and analysis Peter M Todd is a doctoral candidate in the PDP Research Group of the Psychology Department at Stanford University Gareth Loy is an award winning composer a lecturer in the Music Department of the University of California San Diego and a member of the technical staff of Frox Inc Contributors Jamshed J Bharucha Peter Desain Mark Dolson Robert Gjerclingen Henkjan Honing B Keith Jenkins Jacqueline Jons Douglas H Keefe Tuevo Kohonen Bernice Laden Pauli Laine Otto Laske Marc Leman J P Lewis Christoph Lischka D Gareth Loy Ben Miller Michael Mozer Samir I Sayegh Hajime Sano Todd Soukup Don Scarborough Kalev Tiits Peter M Todd Kari Torkkola Language and Music as Cognitive Systems Patrick Rebuschat, 2012 The past 15 years have witnessed an increasing interest in the comparative study of language and music as cognitive systems This book presents an interdisciplinary study of language and music exploring the following core areas structural comparisons evolution learning and processing and neuroscience **Connectionist Models of Learning, Development and Evolution** Robert M. French, Jacques P. Sougne, 2012-12-06 Connectionist Models of Learning Development and Evolution comprises a selection of papers presented at the Sixth Neural Computation and Psychology Workshop the only international workshop devoted to connectionist models of psychological phenomena With a main theme of neural network modelling in the areas of evolution learning and development the papers are organized into six sections The neural basis of cognition Development and category learning Implicit learning Social cognition Evolution Semantics Covering artificial intelligence mathematics psychology neurobiology and philosophy it will be an invaluable reference work for researchers and students working on connectionist modelling in computer science and psychology or in any area related to cognitive science Artificial Neural Networks in Real-life Applications Juan Ramon Rabunal, Julian Dorado, 2006-01-01 This book offers an outlook of the most recent works at the field of the Artificial Neural Networks ANN including theoretical developments and applications of systems using intelligent characteristics for adaptability Provided by publisher *Readings in Music and Artificial Intelligence* Eduardo Reck Miranda, 2013-10-28 The interplay between emotional and intellectual elements feature heavily in the research of a

variety of scientific fields including neuroscience the cognitive sciences and artificial intelligence AI This collection of key introductory texts by top researchers worldwide is the first study which introduces the subject of artificial intelligence and music to beginners Eduardo Reck Miranda received a Ph D in music and artificial intelligence from the University of Edinburgh Scotland He has published several research papers in major international journals and his compositions have been performed worldwide Also includes 57 musical examples *The Cognitive Neuroscience of Music* Isabelle Peretz, Robert J. Zatorre, 2003-07-10 Music offers a unique opportunity to better understand the organization of the human brain Like language music exists in all human societies Like language music is a complex rule governed activity that seems specific to humans and associated with a specific brain architecture Yet unlike most other high level functions of the human brain and unlike language music is a skill at which only a minority of people become proficient The study of music as a major brain function has for some time been relatively neglected Just recently however we have witnessed an explosion in research activities on music perception and performance and their correlates in the human brain This volume brings together an outstanding collection of international authorities from the fields of music neuroscience psychology and neurology to describe the amazing advances being made in understanding the complex relationship between music and the brain Aimed at psychologists and neuroscientists this is a book that will lay the foundations for a cognitive neuroscience of music

Connectionist Representations of Tonal Music Michael R. W. Dawson, 2018-03-13 Previously artificial neural networks have been used to capture only the informal properties of music However cognitive scientist Michael Dawson found that by training artificial neural networks to make basic judgments concerning tonal music such as identifying the tonic of a scale or the quality of a musical chord the networks revealed formal musical properties that differ dramatically from those typically presented in music theory For example where Western music theory identifies twelve distinct notes or pitch classes trained artificial neural networks treat notes as if they belong to only three or four pitch classes a wildly different interpretation of the components of tonal music Intended to introduce readers to the use of artificial neural networks in the study of music this volume contains numerous case studies and research findings that address problems related to identifying scales keys classifying musical chords and learning jazz chord progressions A detailed analysis of the internal structure of trained networks could yield important contributions to the field of music cognition **Musical Networks** Niall Griffith, Peter M. Todd, 1999 This volume presents the most up to date collection of neural network models of music and creativity gathered together in one place Chapters by leaders in the field cover new connectionist models of pitch perception tonality musical streaming sequential and hierarchical melodic structure composition harmonization rhythmic analysis sound generation and creative evolution The collection combines journal papers on connectionist modeling cognitive science and music perception with new papers solicited for this volume It also contains an extensive bibliography of related work Contributors Shumeet Baluja M I Bellgard Michael A Casey Garrison W Cottrell Peter Desain Robert O Gjerdingen Mike
