

OPERATION

DIGGING WITH BUCKET

1. Approach digging site with lift arm slightly raised and bucket tilted forward until it contacts the ground.

2. Raise the bucket slightly to maintain uniform depth and give added traction. Drive forward until the bucket is flat.

3. Break the ground by driving forward and lowering the lift arm gradually as the machine is driven forward. Use only sufficient bucket digging angle to easily fill the bucket.

On very hard ground, use of optional bucket teeth is recommended. Reducing engine speed to 1/4 throttle will allow smoother digging when the first cut is made.

4. Roll the bucket up and back away from the cut. When starting an excavation, use as far a ramp as possible. Plan so that most of the work can be done with the bucket being driven forward out of the excavation, rather than being backed out. When driving the machine up an incline, always be sure the heavy end of the machine goes up first. If the machine has a load in the bucket, the machine should be driven up/forward. If the bucket is empty, drive up the slope backwards.

OPERATION

TRANSPORTING WITH A LOADED BUCKET

1. The closer to the ground the bucket is held the better the stability, especially on slopes or when turning the machine. For travel, keep the bucket at its lowest possible position and tipped back to afford maximum stability.

CAUTION: Never transport a load with the bucket fully raised.

2. When loading into a truck, keep positioned so that a minimum of movement is necessary. Utilizing the full clearing capability as shown above, can cut down on loading time. Use a "pivot-point" rather than a "stop-and-go" turn.

DUMPING BUCKET

1. Raise the lift arm when moving toward the vehicle being loaded. Move slowly if the bucket is loaded to dump. When raising the lift arm, correct tilt of bucket to avoid spilling material into operator's area.

2. Gradually empty bucket at minimum height before stopping. By emptying before stopping, machine stability can be maintained. To shake loose material stuck in bottom of bucket, lift valve may be "bumped" back and forth.

3. Raise empty bucket and back away from vehicle, gradually lowering lift arm.

LEVELING / BACK GRADING

1. Spread dirt by driving forward with bucket flat down and rolled off the ground.

2. To level, raise lift arm and tilt bucket down. Place lift arm control pedal in "float" position to allow bucket to follow ground contour. Drive machine backward, spreading material evenly.
