Congress. Senate. Committee on Commerce, Science, and Transportation, 1978 **Articulating Novelty in Science and Art** Julian Stubbe, 2017-07-18 Julian Stubbe aims at characterizing what novelty is in the becoming of objects and how the new becomes part of a shared reality The study s method is comparative and concerned with technological practice in science as well as in art It draws on a detailed comparison of two cases the becoming of a robotic hand made from silicone and the genesis of a media art installation that renders visible changes in the earth s magnetic field In contrast to the canon of sociological innovation studies which regard novelty as what actors in the field label as new or innovation the author attempts to delineate certain shifts in an object s becoming that individuate an object and render its difference visible This entails attending the enactment

of novelty through cultural imaginaries and narratives about technologies as well as acknowledging the shifts in technical forms that make loose elements enter a new kind of circularity From this perspective novelty is an articulation when differences are not contradicting but when differing characteristics are aligned fitted and click in so as to appear and behave as a distinct entity **Nuclear Science Abstracts** ,1972 **NASA Authorization for Fiscal Year 1979** United States.
