Applications, Tools and Techniques on the Road to Exascale Computing Koen de Bosschere, Mark Sawyer, 2012 Single processing units have now reached a point where further major improvements in their performance are restricted by their physical limitations. This is causing a slowing down in advances at the same time as new scientific challenges are demanding exascale speed. This has meant that parallel processing has become key to High Performance Computing (HPC). This book contains the proceedings of the 14th biennial ParCo conference ParCo2011 held in Ghent, Belgium. The ParCo conferences have traditionally concentrated on three main themes: Algorithms, Architectures, and Applications.

Nowadays though the focus has shifted from traditional multiprocessor topologies to heterogeneous and manycores incorporating standard CPUs GPUs Graphics Processing Units and FPGAs Field Programmable Gate Arrays These platforms are at a higher abstraction level integrated in clusters grids and clouds The papers presented here reflect this change of focus New architectures programming tools and techniques are also explored and the need for exascale hardware and software was also discussed in the industrial session of the conference This book will be of interest to all those interested in parallel computing today and progress towards the exascale computing of tomorrow Maximum PC, 2007-02 Maximum PC is the magazine that every computer fanatic PC gamer or content creator must read Each and every issue is packed with punishing product reviews insightful and innovative how to stories and the illuminating technical articles that enthusiasts crave **The Search for ExtraTerrestrial Intelligence** Stelio Montebugnoli, Andrea Melis, Nicolò Antonietti, 2021-03-27 This book presents the latest knowledge of the newly discovered Earth like exoplanets and reviews improvements in both radio and optical SETI A key aim is to stimulate fresh discussion on algorithms that will be of high value in this extremely complicated search Exoplanets resembling Earth could well be able to sustain life and support the evolution of technological civilizations but to date all searches for such life forms have proved fruitless The failings of SETI observations are well recognized and a new search approach is necessary In this book different detection algorithms that exploit state of the art low cost and extremely fast multiprocessors are examined and compared Novel methods such as the agnostic entropy and high sensitivity blind signal extraction algorithms should represent a quantum leap forward in SETI The book is of interest to all researchers in the field and hopefully stimulates significant progress in the search for extraterrestrial intelligence
