Describe how

Sign language is a form of communication of persons who are predominantly by the deaf community. Instead of using a printed word, it employs hand gestures, facial expressions, and body movements to convey meaning. Sign language is a full-fledged natural language with its own grammar, syntax, and words in writing. National Sign Language is used in the United States, and is also used in other countries.

The history of sign language dates back centuries, though most were often secret and uncodified. Because of this, it is hard to pin down when it was first used. Some early sign language systems were used by deaf people to communicate with each other. In the 18th century, the first deaf school was founded in Paris, and it was there that the first sign language system was developed.

The American Sign Language (ASL) system is the primary form of communication for deaf people in the United States. It is a natural language, meaning it is not a direct translation of English. ASL has its own grammar, syntax, and vocabulary. It is used by about 1 million people in the United States, and it is also used in other countries.

Learning to use ASL can be a challenge, but it is a rewarding experience. It allows deaf people to communicate with each other and with hearing people. It is also a way to learn about a different culture and way of life.

Text Complexity and Reading

Comprehension Tests Erik Castello,2008 Based on the analysis of a specially compiled corpus of internationally recognized English as a foreign language EFL reading tests at different levels of proficiency this volume explores the relation between the complexity of written texts and the difficulty of reading comprehension tests It brings together linguistic investigations into the text inherent complexity of the tests and a study of the data derived from their administration to groups of Italian university students The study of text complexity draws on corpus linguistics text linguistics and systemic functional linguistics Both quantitative and qualitative analyses are carried out on the language used in the reading texts and in the related tasks that make up the corpus of tests The assessment of test difficulty on the other hand is informed by research on language testing and in particular by findings and methodologies of Classical Test Theory and Item Response Theory Relevant aspects of these theories are used to analyze and interpret both the data obtained from the administration of the tests and the data collected by means of feedback questionnaires completed by test takers The application of such diverse methodologies and the subsequent comparison of the results of the analyses has brought out interesting correlations between text inherent complexity perceived test difficulty and actual test difficulty

Simplified Signs: A Manual Sign-Communication System for Special Populations, Volume 1. John D. Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30 Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages It is the culmination of over twenty years of research and development by the authors The Simplified Sign System has been developed and tested for ease of sign comprehension memorization and formation by limiting the complexity of the motor skills required to form each sign and by ensuring that each sign visually resembles the meaning it conveys Volume 1 outlines the research underpinning and informing the project and places the Simplified Sign System in a wider context of sign usage historically and by different populations Volume 2 presents the lexicon of signs totalling approximately 1000 signs each with a clear illustration and a written description of how the sign is formed as well as a memory aid that connects the sign visually to the meaning that it conveys While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities cerebral palsy autism or aphasia it may also assist the communication needs of a wider audience such as healthcare professionals aid workers military personnel travellers or parents and children who have not yet mastered spoken language The system also has been shown to enhance learning for individuals studying a foreign language Lucid and comprehensive this work constitutes a valuable resource that

will enhance the communicative interactions of many different people and will be of great interest to researchers and educators alike
