Utilizing AI and Machine Learning in Financial Analysis Darwish, Dina, Kumar, Sanjeev, 2025-01-21 Machine learning models can imitate the cognitive process by assimilating knowledge from data and employing it to interpret and analyze information. Machine learning methods facilitate the comprehension of vast amounts of data and reveal significant patterns incorporated within it. This data is utilized to optimize financial business operations, facilitate well-informed judgements, and aid in predictive endeavors. Financial institutions utilize it to enhance pricing, minimize risks stemming from human error, mechanize repetitive duties, and comprehend client behavior. Utilizing AI and Machine Learning in Financial Analysis explores new trends in machine learning and artificial intelligence implementations in the financial sector. It examines techniques in financial analysis using intelligent technologies for improved business services. This book covers topics such as customer relations, predictive analytics, and fraud detection and is a useful resource for computer engineers, security professionals, business owners, accountants, academicians, data scientists, and researchers. *Agent AI for Finance* Chung-Chi Chen, Hiroya Takamura, 2025-08-17 This open access book provides an overview of the current state of financial argument mining and financial text generation and presents the authors' thoughts on the blueprint for NLP in finance in the agent AI era. Financial documents contain numerous causal inferences and subjective opinions. In a previous book, *From Opinion Mining to Financial Argument Mining* Springer 2021, the first author discussed understanding financial documents in a fine-grained manner, particularly those containing opinions. The book highlighted several future directions such as financial argument mining, multimodal opinion understanding, and analysis generation and anticipated a lengthy journey for these topics. However, since 2022, ChatGPT and large language models (LLMs) have shown promising advancements, motivating the authors to write this second book on the topic of financial Natural Language Processing (NLP). Agent-based AI systems have been widely discussed since the advent of LLMs. This book aims to equip researchers and practitioners with the latest methodologies, concepts, and frameworks for developing, deploying, and evaluating AI agents with capabilities in multimodal understanding, decision making, and interaction. It places a special emphasis on human-centered decision making and multi-agent cooperation in financial applications. The book surveys the current landscape and discusses future research and development directions. Targeting a wide audience from students to seasoned researchers in AI and finance, this book offers an overview of recent trends in Agent AI for finance. It provides a foundation for students to understand the field and design their research direction while inviting experienced researchers to engage in discussions on open research questions informed by pilot experimental results. Although this book focuses on financial applications, the discussed concepts and methods can also be applied to other real-world applications by integrating domain-specific characteristics. The authors look forward to seeing new findings and more novel extensions based on the proposed ideas. **Generative AI** N. Gayathri, S.
