Enterprise Grade Privileged Access

Management: Architecting Cyber Resilience at Scale RAVI KUMAR KOTAPATI, DR. SANJOLI KAUSHIK, PREFACE In today s digitally connected enterprise the keys to the kingdom lie in privileged accountsadmin credentials service accounts and powerful access tokens that if misused can bring even the most sophisticated IT environments to their knees As cyber threats continue to evolve in complexity and scale organizations are recognizing that traditional perimeter defenses are no longer sufficient The shift to cloud computing hybrid infrastructures SaaS applications DevOps and remote work has further dissolved security perimeters turning Privileged Access Management PAM into a frontline defense mechanism This book

emerges from the urgent need to build enterprise grade PAM strategies that go beyond compliance checklists. It combines real world case studies, technical deep dives and architectural guidance to help security architects, CISOs, compliance managers and system engineers design, deploy and scale PAM frameworks in line with today's security demands and tomorrow's innovations. Drawing from industry standards, regulatory frameworks and insights from major implementations, the content of this book provides actionable guidance that is both strategic and tactical. Whether you are starting your PAM journey or optimizing an existing deployment, this work is designed to help you transform privileged access into a governed, auditable and resilient layer of your cybersecurity posture. I hope this book serves as both a compass and a reference as you architect systems that prioritize zero trust, operational resilience and intelligent access governance in an era of constant cyber disruption.

The Zero Trust Framework and Privileged Access Management (PAM) Ravindra Das, 2024-05-02 This book is about the Zero Trust Framework Essentially this is a methodology where the IT Network Infrastructure of a business is segmented into smaller islands each having its own lines of defense This is primarily achieved through the use of Multifactor Authentication MFA where at least three more authentication layers are used preferably being different from one another Another key aspect of the Zero Trust Framework is known as Privileged Access Management PAM This is an area of Cybersecurity where the protection of superuser accounts rights and privileges must be protected at all costs from Cyberattackers In this regard this is where the Zero Trust Framework and PAM intertwine especially in a Cloud based platform such as Microsoft Azure However as it has been reviewed in one of our previous books the use of passwords is now becoming a nemesis not only for individuals but for businesses as well It is hoped that by combining the Zero Trust Framework with PAM password use can be eradicated altogether thus giving rise to a passwordless society
