How AI Works Ronald T.

Kneusel,2023-10-24 AI isn't magic How AI Works demystifies the explosion of artificial intelligence by explaining without a single mathematical equation what happened when it happened why it happened how it happened and what AI is actually doing under the hood Artificial intelligence is everywhere from self driving cars to image generation from text to the unexpected power of language systems like ChatGPT yet few people seem to know how it all really works How AI Works unravels the mysteries of artificial intelligence without the complex math and unnecessary jargon You'll learn The relationship between artificial intelligence machine learning and deep learning The history behind AI and why the artificial intelligence revolution is happening now How decades of work in symbolic AI failed and opened the door for the emergence of neural networks What neural networks are how they are trained and why all the wonder of modern AI boils down to a simple repeated unit that knows how to multiply input numbers to produce an output number The implications of large language models like ChatGPT and Bard on our society nothing will be the same again AI isn't magic If you've ever wondered how it works what it can do or why there's so much hype How AI Works will teach you everything you want to know

Generative AI Ravindra Das,2024-10-10 The cybersecurity landscape is changing for sure For example one of the oldest threat variants is that of phishing It evolved in the early 1990s but even today it is still being used as a primary threat variant and has now become much more sophisticated covert and stealthy in nature For example it can be used to launch ransomware social engineering and extortion attacks The advent of Generative AI is making this much worse For example a cyberattacker can now use something like ChatGPT to craft the content for phishing emails that are so convincing that it is almost impossible to tell the difference between what is real and what is fake This is also clearly evident in the use of deepfakes where fake images of real people are replicated to create videos to lure unsuspecting victims to a fake website But Generative AI can also be used for the good to combat Phishing Attacks This is the topic of this book In this we cover the following A review of phishing A review of AI Neural Networks and Machine Learning A review of Natural Language Processing Generative AI and the Digital Person A proposed solution as to how Generative AI can combat phishing attacks as they relate to Privileged Access accounts
