Refining the Mathematics Knowledge Base Bindu Elizabeth Pothen, 2011 Understanding the knowledge that teachers must bring to their classrooms is critical to the advancement of the field of teacher education Understanding how teacher knowledge impacts various aspects of teacher practice is also critical Understanding the interplay between teacher knowledge and practice and consequently the result that this relationship has on student learning is most important This dissertation attempts to advance our collective understanding of the complex relationship between teacher knowledge teacher practice and student learning in the field of elementary mathematics Four third grade teachers were followed as they taught a subset of lessons in a unit on fractions The study first investigates the types of knowledge that the teachers brought to their classrooms Then an examination is conducted of the way in which these types of knowledge impacted their teaching practice Finally the student learning that resulted over the course of these lessons is discussed This study supports the widespread belief that teacher knowledge is important to instruction The descriptions of the case study teachers highlight that their varying levels of knowledge resulted in unique aspects of practice being emphasized in their classrooms This dissertation documents the differences in teaching practice and the trade offs that produce differences in student learning Interesting student learning patterns emerged based on qualitative student interviews Medium students from classrooms in which teachers focused for more sustained periods on mathematical concepts seemed to demonstrate greater procedural fluency and deeper conceptual understanding than their peers in the other classrooms Low students in classrooms where fluency was the focus seemed to show slightly greater procedural fluency though less conceptual understanding than their peers in the classrooms that spent more time on concepts High students showed no appreciable difference across all classrooms This study adds to the field by introducing a new construct the conceptual threshold to offer an explanation of these student learning trends

Rooted in the science of the brain and integrating cognitive neuroscience and child development, Mindful Parenting is a unique program that speaks directly to today's busy families who make up what Dr. Race calls Generation Stress. Research has shown that mindfulness practices stimulate the prefrontal cortex of the brain. Regular stimulation of this part of the brain helps us feel happier, healthier, calmer, less anxious, less stressed, and makes it easier for us to concentrate and think clearly. The very behavior we are hoping our children will display. Dr. Race provides an explanation of the way the brain works and why parents and kids today are more stressed, anxious, and angry than ever before. Practical solutions to the problem: Things parents can do to change brain patterns and create a more relaxed and happier home. Brain Coolers: Quick tips that can be used in the moment to help families relax, recharge, and create happiness, such as The Three Breath Hug. Mindful Parenting understands the realities of raising a family in our fast-paced and often frenetic world and provides hundreds of easy-to-implement solutions both for parents and their children to help them manage stress, create peace, and live happier lives.
