Injury Prevention in Youth Football Players Hanna Lindblom,2019-10-08 Background With 17 35% of all 14 year olds in Sweden being active in football injuries do occur most frequently during match play Based on knowledge of injury mechanisms and risk factors different injury prevention exercise programmes IPEPs have been developed In this thesis the Swedish IPEP Knee Control was used as a model for injury preventive training Aim The overall aim of this thesis was to improve our understanding of the effects of the Knee Control injury prevention exercise programme on sports performance and jump landing technique as well as exploring programme implementation and coach experiences of using the programme in youth football Methods Studies I and IV were cluster randomised trials focusing on the performance effects of Knee Control Study I included four teams with 41 female youth football players mean

age 14 The intervention group used Knee Control twice weekly for 11 weeks whereas the control group teams did their usual training Knee Control includes six different exercises at four levels of difficulty and with partner exercises and is meant to be used during warm up at every training session Performance was tested using a battery of balance agility jump and sprint tests at baseline and follow up at an indoor venue Study IV had a similar set up but included two different interventions Knee Control and a new further developed version of the programme Knee Control which were studied during an eight week intervention involving eight youth football teams four male four female mean age 14 with 77 players Similar but not identical performance tests were used in Study IV along with drop vertical jumps and tuck jump assessment to assess jump landing technique Studies II and III focused on the implementation context Study II was questionnaire based using the RE AIM framework covering the reach effectiveness adoption implementation and maintenance of Knee Control Coaches for female youth teams n 352 one representative of the national football association and representatives of eight district football associations responded to web based questionnaires Data collection was performed two years after the nation wide implementation of Knee Control started Study III was a qualitative study that followed up on the results of Study II Interviews were conducted with 20 coaches for female football teams and analysed using qualitative content analysis The interviews focused on factors that affected the adoption and use of Knee Control All 20 coaches had experience of Knee Control Results Limited positive effects were seen on jump landing technique in girls with the total tuck jump assessment score improving as well as two separate criteria the number of jumps accomplished during the 10 second test and additionally an increased knee flexion angle upon landing from a drop vertical jump No improvements on the performance tests were found in either Study I or Study IV Both studies however suffered from low player compliance with the IPEPs and as a result low training dosage No major differences in results were seen between Knee Control and Knee Control in Study IV Study II showed that 91% of the responding coaches were familiar with Knee Control they perceived the programme to be effective 74% had started to use it and it was fairly well maintained over time However only one third of the coaches used the programme every week and few used the whole programme There were no formal policies for programme implementation and use in the district football associations and clubs Study III showed that the coach was vital for programme use but needed social support buy in from players resources and a feasible programme to facilitate programme adoption and use When facing challenges with Knee Control implementation and use the coaches did their best to work around these obstacles for example by modifying the programme content or dosage Conclusions In conclusion limited positive effects on jump landing technique were seen in girls potentially affecting risk factors for injury positively No clinically meaningful effects from Knee Control or Knee Control were seen on performance tests as measured in the studies in either boys or girls This may be related to the low training dosage The high programme reach perceived effectiveness adoption and fairly high maintenance of Knee Control were positive The modifications of programme content and or dosage were concerning but will

Child Welfare in Football Celia Brackenridge, Andy Pitchford, Kate Russell, Gareth Nutt, 2006-12-01 Sport and those who run it have an important duty to ensure the safety and wellbeing of young participants. This text presents the findings of a unique research project into the experiences of a wide range of stakeholders in contemporary youth soccer, exploring crucial issues of child protection, social policy and the culture and governance of sport. It covers The youth soccer context, twenty-first century family life, the sports policy background and the organisation, governance and culture of the English game. Research findings, the experiences of children and young people, parents and carers, coaches, teachers, referees, Child Protection Officers, Football Development Officers and those involved in women's disability and professional soccer. Issues in social policy, research, methodological, ethical and management challenges. Conclusions and implications, the benefits and limitations of different approaches to the protection of children and young people in sport. For researchers, professionals and decision makers, this text provides important new insight into the impact of child protection policies and into the potential for evidence-based practice in youth sport.

Analysis Within the Systems Development Life-Cycle Rosemary Rock-Evans, 2014-05-17 Analysis within the Systems Development Life Cycle Book 2 Data Analysis The Methods describes the methods for carrying out data analysis within the systems development life cycle and demonstrates how the results of fact gathering can be used to produce and verify the analysis deliverables. A number of alternative methods of analysis other than normalization are suggested. Comprised of seven chapters, this book shows the tasks to be carried out in the logical order of progression: preparation, collection, analysis of the existing system, which comprises the tasks of synthesis, verification and approval, and in each case how the input from the previous task is converted to the output for the next task until the final output, the verified approved deliverables, is obtained. The first chapter puts analysis into its place in the Systems Development Cycle (SDC) and explains what analysis really means. The next chapters cover, in logical sequence of dependency, the actual tasks of data analysis. The advantages and disadvantages of each method

are described in the context of the life cycle as a whole and in terms of the reliability of raw input time problems and so on Each of the data models obtained using the different methods can be combined and subsequently refined using a number of step by step checks The final chapter shows how the meta model can be expanded by considering the intermediate outputs of the tasks of data analysis This text will be of interest to systems analysts and designers and those who are involved in expert systems
