New Aspects of Cancer Stem Cell Biology Ugo Cavallaro,Marco Giordano,2020-11-23 The cancer stem cell CSC paradigm represents one of the most prominent breakthroughs of the last decades in tumor biology CSCs are that subpopulation within a tumor that can survive conventional therapies and as a consequence are able to fuel tumor recurrence Nevertheless the biological characteristics of CSCs and even their existence remain the main topic among tumor biologists debates The difficulty in achieving a better definition of CSC biology may actually be explained by the plasticity of such a cell subpopulation Indeed the emerging view is that CSCs represent a dynamic state of tumor cells that can acquire stemness related properties under specific circumstances rather than referring to a well defined group of cells Regardless of their origin it is clear that designing novel antitumor treatments based on the eradication of CSCs will only be possible upon unraveling the biological mechanisms that underlie their pathogenic role in tumor progression and therapy resistance The Special Issue on New aspects of cancer stem cell biology implications for innovative therapies aims at highlighting recent insights into CSC features that can make them an attractive target for novel therapeutic strategies

Hydropower Efficiency, Grade 4 Carla C. Johnson,Janet B. Walton,Erin Peters-Burton,2024-04-22 What if you could challenge your fourth graders to create a minimally invasive highly efficient dam With this volume in the STEM Road Map Curriculum Series you can Hydropower Efficiency outlines a journey that will steer your students toward authentic problem solving while grounding them in integrated STEM disciplines Like the other volumes in the series this book is designed to meet the growing need to infuse real world learning into K 12 classrooms This interdisciplinary four lesson module uses project and problem based learning to help students create a highly efficient dam that has a minimal impact on the environment Students will explore the use of natural resources to provide energy needs specifically hydropower while exploring the workings of watermills wind turbines and generators to help build an understanding of the effects of dams In creating their dam they will learn about the various types of alternative hydropower sources including wave and tidal power and track the progress of electrification in the U S on a timeline alongside researching the positive and negative consequences of hydropower To support this goal students will do the following Use the engineering design process EDP to create a design for a dam wind turbine and water wheel Compare and contrast renewable power sources Evaluate power sources for efficiency Identify positive and negative consequences of human modifications of the environment Identify and describe how several sources of renewable energy are used across the U S Use mapping skills to determine where natural resources are being accessed for energy usage Effectively utilize shapes materials and measurements to create a model of a hydropower system The STEM Road Map Curriculum Series is anchored in the Next Generation Science Standards the Common Core State Standards and the Framework for 21st Century Learning In depth and flexible Hydropower Efficiency can be used as a whole unit or in part to meet the needs of districts schools and teachers who are charting a course toward an integrated STEM approach **Women in Nanotechnology** Pamela M. Norris,Lisa E. Friedersdorf,2019-07-16 This book celebrates a few examples of the many women who have advanced the field of nanotechnology The book opens with an overview of the field illuminating how nanotechnology is opening the door to manipulating matter on a scale one billionth of a meter Then the use of nanotechnology to improve science and scientific literacy is discussed and strategies for incorporating nanotechnology in K 12 education are presented Next an array of female scientists provide technical descriptions of how their work is impacting their respective areas Topics include applications in the energy electronics water communication and

health care sectors among others The book closes with a historical perspective on the U S National Nanotechnology Initiative and future prospects for nanotechnology This book provides the opportunity to appreciate some of the key advancements made by women engineers in nanotechnology and to become inspired by the ingenuity and creativity collaborative nature and altruistic inventiveness of women engineers Includes contributions from leading female scientists in nanotechnology Highlights topics in nanotechnology ranging from health care to sensors to alternative energy to clean water to nanoelectronics Presents an opportunity to learn about the breadth depth and impact of the field of nanotechnology and women s important contributions to it **Cruising World** ,2001-01 **Electronics Now** ,1999 *Surviving and Thriving: How Crops Perceive and Respond to Temperature Stress* Zemin Wang,Yi Wang ,Darren Wong,2025-01-27 The dramatic temperature fluctuations spurred by climate change inhibit plant growth and threaten crop productivity Unraveling how plants defend themselves against temperature stress induced cellular impairment is not only a crucial fundamental issue but is also of critical importance for agricultural sustainability and food security Improving crop tolerance to abiotic stress conditions requires a deep understanding of the response of plants to changes in their environment This response is dependent on early and late signal transduction events that involve important signaling molecules such as reactive oxygen species ROS sugars different plant hormones and other signaling molecules It is the integration of these signaling events mediated by an interplay between ROS sugars and different plant hormones that orchestrates the plant response to abiotic stress and drive changes in transcriptomic metabolic and proteomic networks that lead to plant acclimation and survival This Research Topic explores the crops balancing growth and temperature stress responses and how these findings can be used to increase crop quality and yield potential **Plant Microbiome: Interactions, Mechanisms of Action, and Applications, volume III** Alok Kumar Srivastava,George Newcombe,Gustavo Santoyo ,Prem Lal Kashyap,2025-11-11 Due to the success of the original Research Topic and the following Volume II we have decided to launch a Volume III of Plant Microbiome Interactions Mechanisms of Action and Applications The relationship between plants and their surroundings especially those plant microbe interactions with a beneficial output remain the center of considerable attention Plants depend on their microbiomes for multifarious life supporting activities including nutrient acquisition and augmentation of their defense systems against biotic and abiotic stresses The interactions between a plant and its microbiome are highly complex and dynamic in nature The plant immune system in particular is thought to have a profound impact in determining the plant microbiome structure and diversity Characterizing the plant microbiome and its function could be applied for better crop design and management especially in resource limited environments and to protect plants from intruding pathogens Therefore a deep understanding of the interrelationships of the soil plant microorganism system is essential for improving the efficacy and potential applications of plant growth promoting inocula for achieving sustainable food security and development Recent studies of plant growth promoting rhizobacteria show that cocktails of useful bacteria in the form of

synthetic communities are better than single inoculants which face competition from other microorganisms and could be killed or suppressed under sub optimal conditions Microbial activity should also be considered in the construction of microbial co inoculants Understanding plant microbe interactions and mechanisms will also help in the development of smart microbial fertilizer formulation and application in the future This Research Topic welcomes the following subtopics

Interactomics for sustainable agriculture studies using novel combinatorial approaches employing computational expertise to analyze the data from genomics transcriptomics metabolomics and proteomics based studies leading to identification of targets and validating wet lab experiments with molecular evidence for resolving issues in agriculture and sustainability Please note that purely descriptive sequencing studies will not be considered Plant microbiome studies deciphering the structure and composition of complex microbial communities associated directly or indirectly with the plant i e endophytic epiphytic and rhizospheric communities and their significance Topic Editors Alok Kumar Srivastava and Prem Lal Kashyap have created commercial products related to the Topic All other topic editors declare no competing interests with regard to the Research Topic subject

Plant Protein and Proteome Atlas--Integrated Omics Analyses of Plants under Abiotic Stresses Tingyun Kuang,Xuchu Wang,Xiaochun Qin,Shaojun Dai,Pingfang Yang,Ling Li,2020-05-22 Integrative omics of plants in response to stress conditions play more crucial roles in the post genomic era High quality genomic data provide more deeper understanding of how plants to survive under environmental stresses This book is focused on concluding the recent progress in the Protein and Proteome Atlas in plants under different stresses It covers various aspects of plant protein ranging from agricultural proteomics structure and function of proteins and approaches for protein identification and quantification A total of 27 papers including two timely reviews have contributed to this Special Issue In the first part with the topic of Comparative Proteomics of Different Plants six papers were included to describe the phenotypic changes and proteomic analyses of different plants under different conditions Then another six papers with the topic of Proteomics of Plants under Osmotic Stress were included to describe the recent comparative proteomics analyses of plants under osmotic stress particularly the drought and salinity stresses in leaves of certain plant species The other proteomics studies on several energy plants and economic crops were reported to demonstrate the recent omics studies on different plants during their development processes More stress responsive genes and proteins in these plants were identified These target genes and proteins are important candidates for further functional validation in economic plants and crops

The Creative Imperative Jami Biles Jones,Lori J. Flint,2013-09-23 Provides a solid foundational understanding of creativity that enables readers to elicit creative performance from their students The first book of its kind in the school library field The Creative Imperative School Librarians and Teachers Cultivating Curiosity Together assists educators school librarians school counselors and parents in learning about creativity and inquiry as well as how to foster these desired processes in school settings and beyond The work begins by addressing the foundational aspects of creativity and then

discusses creativity within the educational setting exploring how educators can be more creative themselves and coax creative performance from their students The final part of the text focuses specifically on school libraries and the role of librarians in developing environments and opportunities for inquiry that nurture creativity
