

10 STEP WEIGHT LOSS EXERCISE PLAN

#1 WALK FOR 30 MINUTES EACH DAY

Calories Burned Per Day = 120
Calories Burned Per Week = 840

Walking 30 minutes per day may not seem like much but the consistent effort really pays off and burns close to 1,000 calories in a week.

If a 30 minute walk in one go sounds like too much, try splitting it up into three shorter 10 minute walks.

#2 SPRINT FOR 5 MINUTES EACH DAY

Calories Burned Per Day = 100
Calories Burned Per Week = 700

Adding just 5 minutes of sprinting to your day burns through an impressive 700 calories per week.

Simply do five 1 minute bursts of sprinting at various intervals during the day or make them part of your walk.

#3 DO 5 MINUTES OF BURPEES EACH DAY

Calories Burned Per Day = 46
Calories Burned Per Week = 322

Burpees are a functional, full body exercise that tone and strengthen all your muscles and can help you burn 300+ calories per week.

#4 DO 5 MINUTES OF JUMPING JACKS EACH DAY

Calories Burned Per Day = 48
Calories Burned Per Week = 336

Jumping jacks are a simple but effective cardiovascular exercise that you can perform anytime and anywhere, whenever you have 5 minutes to spare. Not only are they a great calorie burner but they also target all the muscles in your lower body.

#5 GO TO A 1 HOUR SPINNING CLASS EACH WEEK

Calories Burned Per Week = 700

Spinning is one of the most intensive cardiovascular classes there is and burns through a substantial 700 calories in a 1 hour session. Attending just one spinning class per week can make a huge difference when it comes to your overall weight loss success.

#6 DO 1 HOUR OF SWIMMING EACH WEEK

Calories Burned Per Week = 660

Swimming is a brilliant exercise that burns through an impressive 660 calories per hour and gives you a full body workout at the same time. It's also a relatively low impact exercise and a great alternative to the higher impact exercises on this list.

#7 LIFT WEIGHTS FOR 2 HOURS EACH WEEK

Calories Burned Per Week = 440

When it comes to direct calories burned, lifting weights isn't a very efficient exercise. However, muscle cells burn three times more calories than fat cells, so by increasing your overall muscle mass, you can indirectly give the amount of calories your body burns each day a huge boost.

#8 JOG FOR 1 HOUR EACH WEEK

Calories Burned Per Week = 476

Jogging is another excellent exercise for working away those calories and losing weight. It's also a very flexible exercise that can be performed outside or inside on a treadmill.

#9 WEAR ANKLE WEIGHTS WHEN YOU WALK

Calories Burned Per Day = 50
Calories Burned Per Week = 350

Once you've implemented steps 1-8, an innovative way to blast through a few more calories is to wear ankle weights during your daily 30 minute walk. This won't take up any more of your time but the added resistance will burn off 300+ extra calories a week.

#10 GET IN THE RIGHT FRAME OF MIND BEFORE YOU EXERCISE

After you've incorporated the previous nine physical habits into your lifestyle, one final way to boost your weight loss efforts is to get your mindset right before exercising. Doing these exercises without the proper motivation means you won't put maximum effort in and as a result, you'll burn less calories and lose less weight. So make sure that you're 100% motivated and focussed on your weight loss goals before you exercise and perform to your maximum potential.

SUMMARY

Total Calories Burned Per Day = 689
Total Calories Burned Per Week = 4,824

which equates to...

1.4lbs Of Fat Loss Per Week!

How to Lose Weight with Volumetrics (Setting Up a Volumetric Eating Plan) Serge Uri, 2012-03-12 ABOUT THE BOOK People who want to lose weight are frequently overwhelmed by the large number of diets exercise routines nutritional supplements or certain equipment that are available on the market and online Additionally one may feel that counting calories or reading nutritional value labels on food packages is an endless task and decreases their motivation to succeed Barbara Rolls an accomplished nutrition professor at Penn State University recognized the need for a well structured comprehensive and easy to understand approach to weight loss and healthy nutrition She designed a great weight loss diet called Volumetrics that eliminates the need to count calories which lowers stress levels enhances a one's self confidence and provides several nutritional principles that may be applied immediately These principles do not require extensive preparation or reading EXCERPT FROM THE BOOK The reason why energy density and food volume are important when it comes to weight loss is because of our digestive system physiology and the regulation of appetite The brain centers which are responsible for appetite and food intake receive continuous feedback from certain nervous receptors located in the stomach walls These nerve endings do not effectively react to food composition but they do respond to food volume This means that stomach receptors do not distinguish between a certain volume of potatoes or the same volume of cheese Obviously cheese contains more fat and thus more calories However your brain has no way of knowing the energetic density of cheese it receives data only about its volume When we eat and food reaches our stomach the nerve receptors are stimulated by the stretch of stomach walls which depends on pressure created by food volume The stomach is abundant in nerves which send nervous signals to brain centers that regulate appetite and food intake When pressure created by food volume reaches a certain threshold the brain sends inhibitory signals that decrease the appetite and reduce the food intake This translates into a sensation of satiety and disappearance of hunger Dr Rolls believes that increasing the consumption of foods with very low and low energy density allows a person to limit the amount of calories and lose weight without the need to monitor calories and perform various calculations The author illustrates the relationship between dietary energy density and energy intake in a 2009 research study conducted at the Department of Nutritional Sciences Pennsylvania State University This makes the Volumetrics diet easy to apply into daily nutrition by putting the advice into practice quickly and effectively Buy a copy to keep reading CHAPTER OUTLINE How to Lose Weight with Volumetrics Introduction Why Is Weight Management Important What is Energy Density of Foods How Does The Volumetrics Diet Work and much more *Low GI Diet 12-week Weight-loss Plan* Jennie Brand-Miller, Joanna Mcmillan-Price, Kaye Foster-Powell, 2011-01-01 This updated edition of Australia's bestselling Low GI Diet program explains how a low GI diet can help you lose weight and keep it off Featuring twelve weeks of menus tailored to your weight and activity level and twelve weeks of easy to follow aerobic and resistance exercises that will take you just 30 minutes a day this book outlines a nutritionally balanced effective and healthy way to start losing weight

from the Perspective of Patients and Medical Professionals Tonio Schoenfelder, Tom Schaal, Anja Mocek, 2024-11-12 Digital health applications DHAs are increasingly being used in patient care in various healthcare systems around the world In some countries such as Belgium and Germany legal frameworks already allow for DHA integration into standard care and their prescription and uniform reimbursement via the patient's health insurance In many other European countries and the USA such a process is still in development DHAs are primarily used by patients themselves but also in consultation with physicians therapists or other healthcare providers They offer the potential for improved health outcomes and increased access to health services especially in rural areas and may lead to an overall improvement in the quality of care The validity of studies on the effects of DHAs on patients and health care systems in general is currently limited since study methods applied do often not allow for drawing causal relationships and most studies focus only on patient outcomes but do not assess how traditional care processes need to be adapted so that DHAs can be effective Therefore unambiguous evidence on which patient relevant outcomes can be improved specifically as a result of integrating DHA into the process of care is currently lacking Downsizing Government and Setting Priorities of Federal Programs United States.
