Grasp Sanjay Sarma, Luke Yoquinto, 2020-08-20 Sarma's book may be the most important work on education written this century Skeptic As the head of Open Learning at MIT Sanjay Sarma has a daunting job description to fling open the doors of the MIT experience for the benefit of the wider world But if you're going to undertake such an ambitious project you must first ask How exactly does learning work What conditions are most conducive Are our traditional classroom methods lecture homework test repeat actually effective And if not which techniques are Grasp takes readers across multiple frontiers from fundamental neuroscience to cognitive psychology and beyond as it explores the future of learning For instance Scientists are studying the role of forgetting exposing it not as a simple failure of memory but a critical weapon in our learning arsenal New developments in neuroimaging are helping us understand how reading works in the brain It's become possible to identify children who might benefit from specialised dyslexia interventions before they learn to read Many schools have begun converting to flipped classrooms in which you watch a lesson at home then do your homework in class Along the way Sarma debunks long held views such as the noxious idea of learning styles while equipping readers with a set of practical tools for absorbing and retaining information across a lifetime of learning He presents a vision for learning that's more inclusive and democratic revealing a world bursting with powerful learners just waiting for the chance they deserve Drawing from the author's experience as an educator and the work of researchers and educational innovators at MIT and beyond Grasp offers scientific and practical insight promising not just to inform and entertain readers but to open their minds
