Raspberry Pi Thorin Klosowski, 2015-06-02 The Raspberry Pi is an inexpensive simple computer that's about the size of a credit card. At first glance it looks like a simple circuit board with a few inputs and outputs, but the Raspberry Pi is actually a computer with multiple inputs and outputs that make it the foundation for an almost limitless number of projects, from creating a wireless internet streaming radio to creating a Wi-Fi hot spot to creating elaborate programmed LED light shows. It's all been done. The real power of the RPi is that it's simple, cheap, and users can build all kinds of useful and fun projects using a few simple tools: some basic programming and a ton of imagination. *Idiot's Guides: Raspberry Pi* is the perfect beginner book for learning how the Raspberry Pi works, how to program it, how to connect it to existing devices to enhance or even hack their existing functionality, and how to put together some basic first projects from scratch. Readers will learn how to download and use the right software for the job, how to program using Scratch, a basic language for programming Linux, and how to come up with their own crazy project ideas for creating virtually anything that requires nothing more than processing power from a simple computer.

Mutual Market Access MMA programme comprising the Shanghai Connect the Shenzhen Connect and the Bond Connect has solidified Hong Kong's status as a unique financial hub connecting the East and the West and in this process has explored a new path for the opening up of China's capital market. In the face of economic structural changes across the globe, Hong Kong seeks to look into innovations in financing the new economy and has built up experiences for reference in the Asian time zone. Hong Kong is gradually establishing a new ecosystem around new economy enterprises and has made them new targets of investment for both Mainland and overseas investors trading under MMA. This book is the first bilingual title in the market that explains in detail the MMA model between Hong Kong and Mainland China and innovations in new economy financing in which experts and research teams who are experienced in these areas discuss in depth on the key functional drivers of innovations in Hong Kong and the Mainland including the MMA new economy financing and global asset allocation. Elaborating the unique concepts of the MMA model and summarising what HKEX has learned in its reforms in new economy financing, this book shall come in handy for market participants to make better use of the MMA model and benefit from the latest reforms of Hong Kong's listing regime.
