

Oracle Real Application Cluster & High Availability

Oracle Real Application Cluster (RAC) is a cluster database. Compared to traditional shared-nothing architecture of single instance database, Oracle Real Application Cluster has shared cache architecture and also shared-disk approaches to provide highly available and scalable solution for any business applications.

One of the key components of Oracle enterprise grid architecture by Oracle is the Real Application Cluster (RAC).

Oracle RAC is a unique technology that provides high availability and scalability for all application types. The Oracle RAC infrastructure is also a key component for implementing the Oracle enterprise grid computing architecture. Having multiple instances access a single database prevents the server from being a single point of failure. Oracle RAC enables you to combine smaller commodity servers into a cluster to create scalable environments that support mission critical business applications. Applications that you deploy on Oracle RAC databases can operate without code changes.

Unique feature called Fast Application Notification (FAN) configuration in Oracle Real Application Cluster helps load balancing when available service status changes. Available service status can change during a scheduled outage for patching or any other regular maintenance task. Service status can also change due to unexpected faults such as node reboot, database service unavailability etc.

Oracle Real Application Cluster has some cost effective options while scaling up or scaling down your size of application usage volume. Olden days normally businesses have to pre-plan the scale of their application few years in advance. Though they did not make use of the full capacity at the initial stage of deployment, the hardware had to be in place in anticipation of high growth in the future. This kind of planning did add additional cost to businesses in planning their hardware and also software licensing. In case of miscalculation of capacity, did cost further cost in moving their application to higher capacity servers in later stages. Once the application is deployed and up and running and if you decide to migrate to different server, it does cost additional overhead in terms of building servers, outages, manpower etc etc. So migrating the application is not an easy exercise and if your business is cost conscious (All business are cost conscious I guess) this type of migration related to scaling up or scaling down should be avoided.

So what is the cost effective solution to avoid these overheads? That is where Oracle Real Application Cluster comes to your rescue.
